What is industrial vacuum cleaner?

Industrial vacuum cleaner has the principle of working quite similar to conventional vacuum cleaner. However, industrial machines are designed to be large and robust, with dust compartments with a capacity of 15 liters or more, which is at least 10 times larger than common household vacuum cleaners.

The machine has a large capacity, strong suction force, and can both absorb dry dust and absorb wastewater. Because the machine is much bigger and more rugged than the household vacuum cleaner, the continuous operation time of the machine is longer and the dust volume is bigger.

So industrial vacuum cleaners are believed to be used in locations with large areas and / or the amount of dust emitted daily such as airports, hotels, hospitals, office buildings, supermarkets, restaurants, factories, factories . to ensure quick and efficient cleaning of dirt.

Industrial vacuum cleaner with large capacity.

What types of industrial vacuum cleaners are there?

Among the numerous industrial vacuum cleaner products on the market today, the simplest way to classify this product is based on the number of motors of the machine. Thus, these products can be divided into 3 main categories:

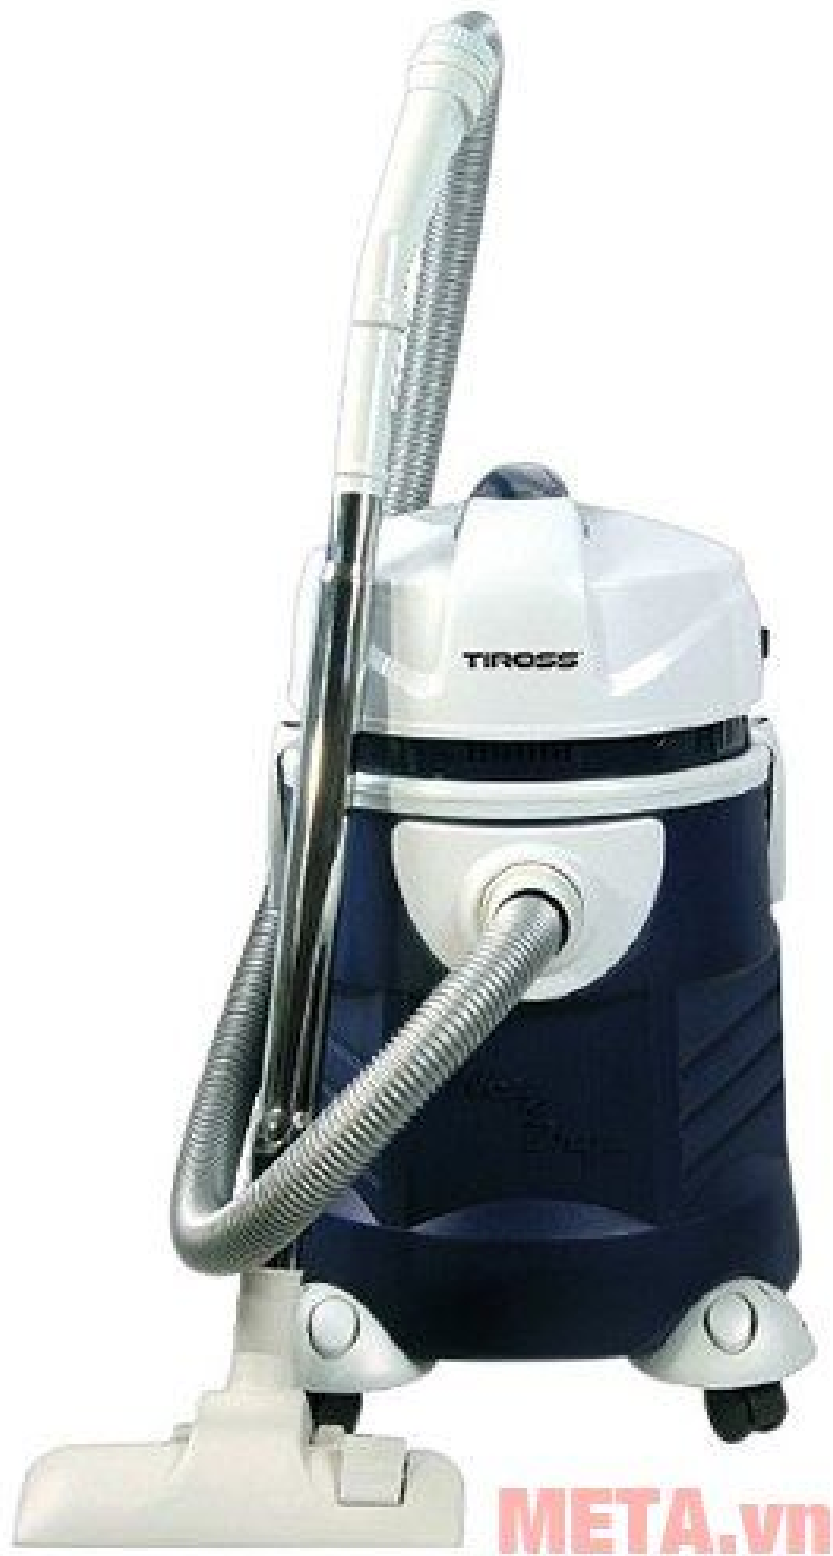

1. Industrial vacuum cleaner 1 motor
2. Industrial vacuum cleaner 2 motors
3. Industrial vacuum cleaner 3 motors

The more the motor of the machine, the greater the capacity of the machine, the longer the vacuuming time of the machine.

For example, if the vacuuming area is not too large and does not need to be cleaned too often, just select a motor type. When the area is vacuumed or the frequency of cleaning is large, consider buying 2 to 3 motors to ensure the most effective cleaning and cleaning needs.

Review industrial vacuum cleaner Tiross, Karcher and HiClean

Tiross industrial vacuum cleaner
