User comments about BitLord

In general, many users prefer BitLord because it seems to have many useful features but not too difficult to use. Meaning it can be the only torrent application suitable for everyone to use.

BitLord allows you to completely disable seeding by setting the upload speed and the number of upload locations to zero. This is useful for those with very little bandwidth for uploading and don't want to use that little bandwidth for torrents.

A feature to mention here, not on the list above, is **Add torrents in Paused state** in the BitLord options list. This feature means that when you first add a torrent to the program, it will not start downloading immediately. This feature can be useful if you want to add torrents to the queue but are not ready to start downloading.

As mentioned above, BitLord's website may be "suspected" of storing malware, but you can ignore these warnings because the software itself has no malware.

Important note : Make sure you don't click through the setup steps too quickly, because an unrelated program tries to install in parallel with BitLord, changing the browser homepage and adding software related to the computer. You must click **Skip** if you want to avoid this.
