You are more likely to have privacy and data risks when you spend more time online. A simple antivirus program is not enough to fight cybercrime - those who are using increasingly sophisticated methods to gain control of, corrupt and exploit your computer. And if you don't keep up with the latest security trends, you'll risk your data yourself.

Recently, IObit has released the latest version of the award-winning system protection tool, IObit Malware Fighter 7. As an advanced security solution for Windows, IObit Malware Fighter has earned praise. praises from newspapers and users. Now with a database of larger threats, faster performance and an easier to use interface, IObit Malware Fighter 7 can be the only online protection tool you'll ever need.

IObit Malware Fighter 7 currently has a threat database greater than 60% updated daily. The number of known threats continues to increase as cybercriminals change tactics, so having a diverse database helps identify risks better as they grow. Beat cyber crime is an endless battle but IObit Malware Fighter 7 is ready to fight it. Equipped with 'combat vehicles' against this powerful malware, you will stay away from Trojan, Worm, Keylogger, Malware, Spyware (Spyware), (Adware) Adware, Phishing, Programming track, Cryptojacking, etc.

Cryptojacking, hijacking computer CPUs to dig electronic money (usually via your Internet browser) has become one of the most worrying cybercrime trends. Because you often don't realize what's going on, electronic money is one of the most insidious online threats. Without proper protection, cybercriminals will blatantly 'pick up' you, while system performance is affected.

Fortunately, IObit Malware Fighter 7 integrates anti-encryption protection, including an extension that prevents malware scripts and cryptojacking from running whenever you browse the web. This is part of the broader and more advanced protection of user browsing in IObit Malware Fighter 7. In short, IObit Malware Fighter 7 is a great online security suite.

Detecting and removing threats is just one feature in IObit Malware Fighter's arsenal 7. The protection is also extended to all devices. Threats don't simply affect the system, but also data, boot drives, built-in webcams and peripheral devices. Anything you plug into the device via USB port is also at risk.

IObit Malware Fighter 7 acts as a security agent for the entire system, preventing unauthorized access to webcams, USB devices and other hardware. IObit Malware Fighter 7 also includes Master Boot Record protection to prevent malware from holding user data for ransom, such as GoldenEye and Petya ransomware attacks.

Finally, IObit Malware Fighter 7 includes an improved and redesigned Safe Box to protect data passwords. This feature prevents anyone who intends to access sensitive information without your consent - even the strongest ransomware programs cannot break the file encryption feature of IObit Malware Fighter. Use a strong password and you can rest assured your data is safe.
