

Review Logitech G203 Prodigy: A good, affordable gaming mouse

Logitech G203 Prodigy is one of the cheapest gaming mice on the market. Its price is \$ 23 (530,000 VND), much more affordable than mice from other big brands.

Logitech G203 Prodigy is one of the cheapest gaming mice on the market. Its price is \$ 23 (530,000 VND), much more affordable than mice from other big brands.

What is Logitech G203 equipped with?

The low price means that Logitech G203 Prodigy only focuses on the basics. Inside, the mouse has an optical sensor with a sensitivity of 8000 DPI (don't be fooled by the 6000 DPI number on the packaging. Logitech improved that number with a firmware update).

8000 DPI sensitivity is a figure that is very suitable for single-player and competitive games. This mouse can please anyone who plays on either 1080p or 1440p - and it's even okay for most players on 4K or widescreen monitors.

Only a single gaming profile can be stored on this mouse (more expensive peripherals usually store 5 profiles) but Logitech software can store an infinite number. Software can also customize each button on the mouse. This is a good application and makes the experience with G203 easier.

The physical design of the Logitech G203 Prodigy mouse is very simple. The physical design of the Logitech G203 Prodigy mouse is very simple. G203 is made from plastic and shaped like any other office mouse. Even so, it is very powerful and comes with customizable RGB LEDs at the back.

Logitech G203 has 6 buttons: 2 main mouse buttons, mouse wheel, DPI switch button and 2 side buttons.

G203 doesn't have the extra convenience features and is very compact, with a width of 64mm and a height of 38mm (slightly smaller than other expensive gaming mice). Size and shape are not a problem for most gamers, but those with large hands will find it a bit inconvenient.

Efficiency

G203 has high speed and precision, suitable for most gaming situations. The two main mouse buttons are designed very logically, quickly and consistently.

However, the G203 is a cheap option which is clearly shown here. The main mouse buttons make a very loud noise, with much travel distance and a little lower speed than the more expensive peripherals. For casual games, this drawback won't slow you down, but competitive gamers will want the mouse buttons to be shallow and faster.

Side buttons are acceptable, but they are not sturdy enough and require too much force to press. The mouse wheel is light and consistent, but scrolling isn't very smooth.

The surface of the G203 is also unimpressive. It is smooth and smooth (the situation will be worse if your hand is sweating). G203 is rated as clickable 10 million times.

G203 has high speed and precision, suitable for most gaming situations

Conclude

Logitech G203 Prodigy is a good, affordable gaming mouse that has enough precision to handle casual games. It even has RGB LEDs. However, the more expensive mice will have sharper, faster buttons, bigger designs, more usability, and extra features.

Advantages

1. Very affordable price

2. Good sensor and main mouse buttons
3. Well-designed software

Defect

1. Some buttons are not sturdy enough to provide a good user experience
2. The design has not really satisfied users
3. Quite small
