

Review Nokia 1.4: Large 6.5 inch screen, 2 day battery, cheap price

So Nokia 1.4 added another cheap smartphone from Nokia that was officially launched yesterday and received many positive feedback from the technology user community. In today's post I will share my first impressions about Nokia 1.4

Nokia 1.4 officially launched in the European market with a price tag of 99 EUR. This is the latest cheap smartphone from Nokia with a simple design, large screen, high capacity battery that can be used up to 2 days but the price is very cheap. In today's article I will share the first impressions about this Nokia 1.4 for you to refer.

Nokia 1.4 is equipped with a large 6.5 inch screen

Perhaps in the price range of less than 3 million, the Nokia 1.4 is a rare device on the market equipped with a 6.5-inch screen, a 20: 9 aspect ratio that is enough for us to comfortably hold. Along with that, the design of a 5 MP selfie camera with a water drop shape helps the device to have a wide viewing angle, and can display a lot of content.

With devices like this Nokia 1.4 I will bring to the elderly to use, because the large screen, the instrument can see the content larger, clearer and easier to manipulate.

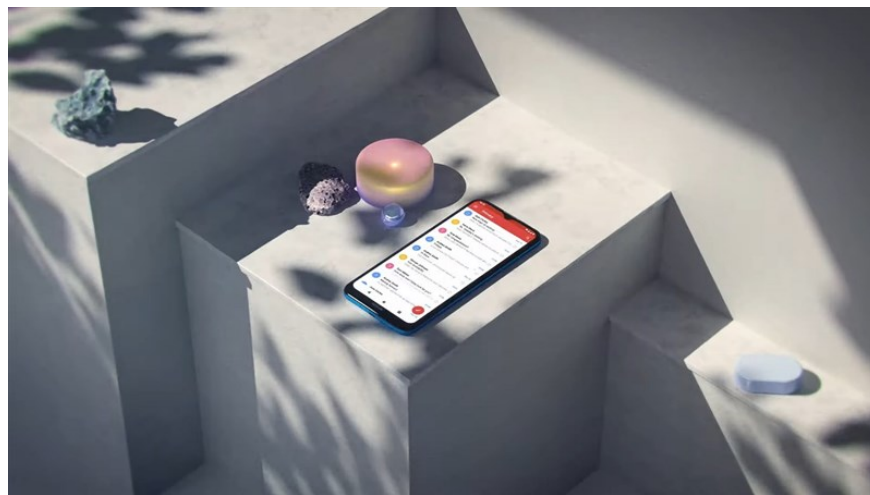

In terms of display quality, the screen of Nokia 1.4 has HD + resolution, accompanied by an IPS LCD panel for true color display, suitable for us to watch movies and play games. In addition, the high brightness is the advantage of the IPS screen so that we can easily use the device to read books and read newspapers very clearly.

Nokia 1.4 has a good configuration with Snapdragon 215 4,000 mAh battery for up to 2 days of use

Because it is a device aimed at the cheap segment, the configuration of Nokia 1.4 will be a bit modest, the device is only equipped with Snapdragon 215, as I mentioned enough to let us use it and be fine with the effects. very basic services such as surfing the web, reading newspapers, watching movies, chatting on social networks of all kinds, and in terms of playing games, I think I will be able to play some light entertainment games.

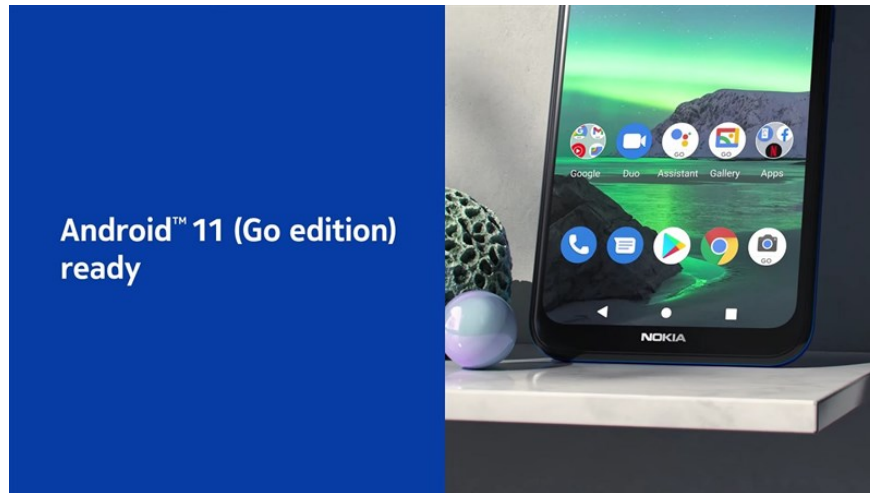

In addition, Nokia 1.4 will have 2 versions of RAM and 3 versions of internal memory for you to choose from depending on your needs:

1. 1GB RAM, 16 GB internal memory.
2. 1 GB RAM, 32 GB internal memory.
3. 3 GB RAM, 64 GB internal memory.

But in return for the modest configuration, Nokia 1.4 will be run on Android 11 platform (Go edition) and will support many shortened 'Lite' applications such as Facebook Lite, Messenger Lite, Camera Lite . Help ensure that our users have a smooth and user-friendly experience. Most especially, the long time to update to new versions of Android does not worry about being abandoned in the middle.

It can be said that although the shortened applications bring a not too optimal experience, in return will help stabilize the performance and experience of the machine much more.

Battery capacity is also a notable point of Nokia 1.4. The device has a 4,000 mAh capacity battery, although this is not too big, but the configuration is not too powerful, so the use of energy will not be too much. Also Nokia mentioned that the Nokia 1.4 has 2 days of usage. So we can freely use it.

Besides, with the battery is not too big, the included 5 W fast charging is enough to shorten the charging time for Nokia 1.4 quickly, helping us to use the device continuously.

Nokia 1.4 with simple design with little change

In terms of design, our Nokia 1.4 has a design that is quite similar to current Nokia products. But with a cheap device like Nokia 1.4, I think it will not need a lot of breakthroughs from the design but the experience of holding and using.

The grip on Nokia devices must say is very good when the design language of the device will be rounded and curved at the corners and edges, providing comfort and comfort as well as not being in hand when using. In addition, the color scheme on the back is also an impressive point to make a difference and attract Nokia 1.4.

Nokia 1.4 Together for longer

Trusted, secure and built to last

Referring to the back, this is where Nokia put the fingerprint sensor and dual camera cluster. It can be said that I like the device with fingerprint sensor on the back because it is easy to use and suitable for those who use the left hand machine like me. Camera is equipped with 2 cameras with 8 MP resolution and 2 MP for macro camera.

Although the camera is not too prominent, Nokia still brings Nokia 1.4 interesting photography features to help us to be more creative and inspired to experience the Nokia 1.4 like portrait photography, macro photography with quality. high.

Epilogue

It can be said that Nokia 1.4 is a device with a not so outstanding design but it is impressed by what Nokia brings such as a large 6.5-inch screen, stable configuration and Android 11 (Go edition), light and smooth. Besides, it is a 4,000 mAh battery for us to comfortably use up to 2 days.
