

# Review on hand OnePlus 10 Pro: 'Extreme' cheap as three Nokia G50s

OnePlus 10 Pro was officially introduced today after a series of leaks a few weeks ago. Let's open the box and quickly evaluate the super cheap product like these three Nokia G50.

OnePlus 10 Pro has been officially announced, the 8GB + 128GB version costs 4699 yuan which is equivalent to three Nokia G50s.

The 8GB + 256GB version is 4999 yuan (about 17.8 million dong) and the 12GB + 256GB version is 5299 yuan (18.8 million dong). The device will officially launch at 10am on January 13. Let's open the box and give a quick hands-on assessment to see what's special about OnePlus 10 Pro.

OnePlus 10 Pro is placed in a box full of accessories including cables, chargers, cases and necessary manuals like many other Chinese manufacturers. Personally, this is better than the elimination trend that Apple and Samsung are trying to follow.

OnePlus 10 Pro comes in two colors black and blue. The black version on hand here applies exclusive "silk glass" technology, which achieves silk-like sophistication on the glass surface while maintaining a matte texture that doesn't attract fingerprints.

The rear camera of the OnePlus 10 Pro uses a 3D ceramic camera module and extends to the aluminum alloy center frame.

This is a composite module in cooperation with Hasselblad with specifications including the main 48MP Sony IMX89 sensor, the second 50MP Samsung JN1 sensor, which is an ultra-wide-angle sensor with a field of view up to 150 degrees. The third camera is an 8MP telephoto lens with 3.3x optical zoom.

OnePlus 10 Pro has a vertical silent button, along with iPhone these are the only two smartphone brands that own this feature.

On the bottom edge of the device, users will find the USB-C charging port, closed speaker and SIM slot. The device has another SIM tray on the side of the device.

OnePlus 10 Pro uses Samsung's most advanced screen with 2K + super clear resolution, 120Hz LTPO adaptive screen refresh rate, original 10-bit color, maximum brightness of 1300 nit. It has full HDR10+ certification and 1000Hz touch sampling rate. It promises excellent image processing capabilities.

In terms of core configuration, OnePlus 10 Pro is equipped with the most powerful Snapdragon 8 Gen 1 chip in Android smartphones, with super-fast flash memory LPDDR5 + UFS3.1, combined into the strongest performance trio. OnePlus also comes with the Strongest Cooling System ever.

OnePlus 10 Pro supports 80W super fast wired charging and 50W wireless super fast charging. The large 5000mAh battery can be charged to 100% in 32 minutes and it can also be charged to 100% in 47 minutes in the wireless carrying case.

In general, for the price of three Nokia G50s, users will get a smartphone with many interesting features, especially in terms of performance thanks to the most powerful hardware on the market today. This promises to come with many new and old experiences. Stay tuned for future reviews.
