2. Surfshark offers great features and affordable prices
3. Why choose Surfshark VPN?
4. Multi-platform support
5. Set up Surfshark
6. Encryption, without leaking DNS and logging

Why need VPN?

It is important that all Internet users connect via virtual private network or VPN. Doing so ensures that the connection is safe and private.

With VPN, you can also avoid restrictions on blocking online streaming, get the best online shopping and travel deals, even speed up when playing online games. Refer to the article: 11 reasons you should use VPN for more details.

Once you know why you need a VPN, you have many options available. But where is the VPN service you are looking for?

Surfshark.com is a worthwhile consideration: 'Surfshark provides a full set of online privacy and security, which helps protect not only the user's IP address but also the physical location and online identity. routes, passwords, credit cards and other important aspects of digital life '.

Surfshark offers great features and affordable prices

One reason you should definitely consider VPN Surfshark is because of the cost factor. Many VPN services will offer discounts if you prepay, but the offers offered by Surfshark are even more attractive.

Surfshark offers three options:

1. \$ 11.95 (277,000VND) / month if paid monthly.
2. \$ 5.99 (139,000VND) / month if prepaid 12 months (50% discount).
3. \$ 1.99 (46,000 VND) / month if paid 24 months in advance (reduced to 83%).

Each of these options also has a 30-day money back guarantee, so if you are not satisfied, you can get your money back easily.

Payment methods for VPN Surfshark also include all the usual options, such as credit / debit cards, PayPal, Google Pay and AliPay. It is even possible to use Bitcoin and Ethereum electronic money to pay for VPN subscribers.

Why choose Surfshark VPN?

Cheap cost is not the only factor making VPN Surfshark an attractive option. This VPN also has remarkable features.

The main features of Surfshark are unlimited devices (most VPNs limit you to 3 or 5 concurrent connections), distribute content fast and without limitation, without logging policy, mechanics Enterprise-class infrastructure, 24/7 support, IKEv2 protocol support, provides 256-bit encryption.

With over 800 servers in more than 50 countries, options to overcome regional restrictions and local censorship laws are a huge plus for VPN Surfshark. Netflix fans can expect access to 7 content libraries from the United States, Britain, Australia, Japan, India, France, Netherlands and Italy.

P2P / torrent support is also available, with support for online players including Ace Player, VLC and PopcornTime. This service also supports torrent applications.

You can access other features of Surfshark VPN through the application, including ad blocker support, whitelist builder and user functions in China. There's also the switch switch feature, which is very important to maintain privacy in the event of a VPN service crash.

Multi-platform support

Another key attraction of VPN Surfshark is the number of platforms it supports. Surfshark provides applications for Windows, macOS, Android and iOS (for iPhone and iPad).

You can also choose to install extensions for Chrome and Firefox. Previously, VPN extensions tended to experience privacy issues, but Surfshark is confident that extensions are extremely powerful.

Public IP address: 89.238.143.102

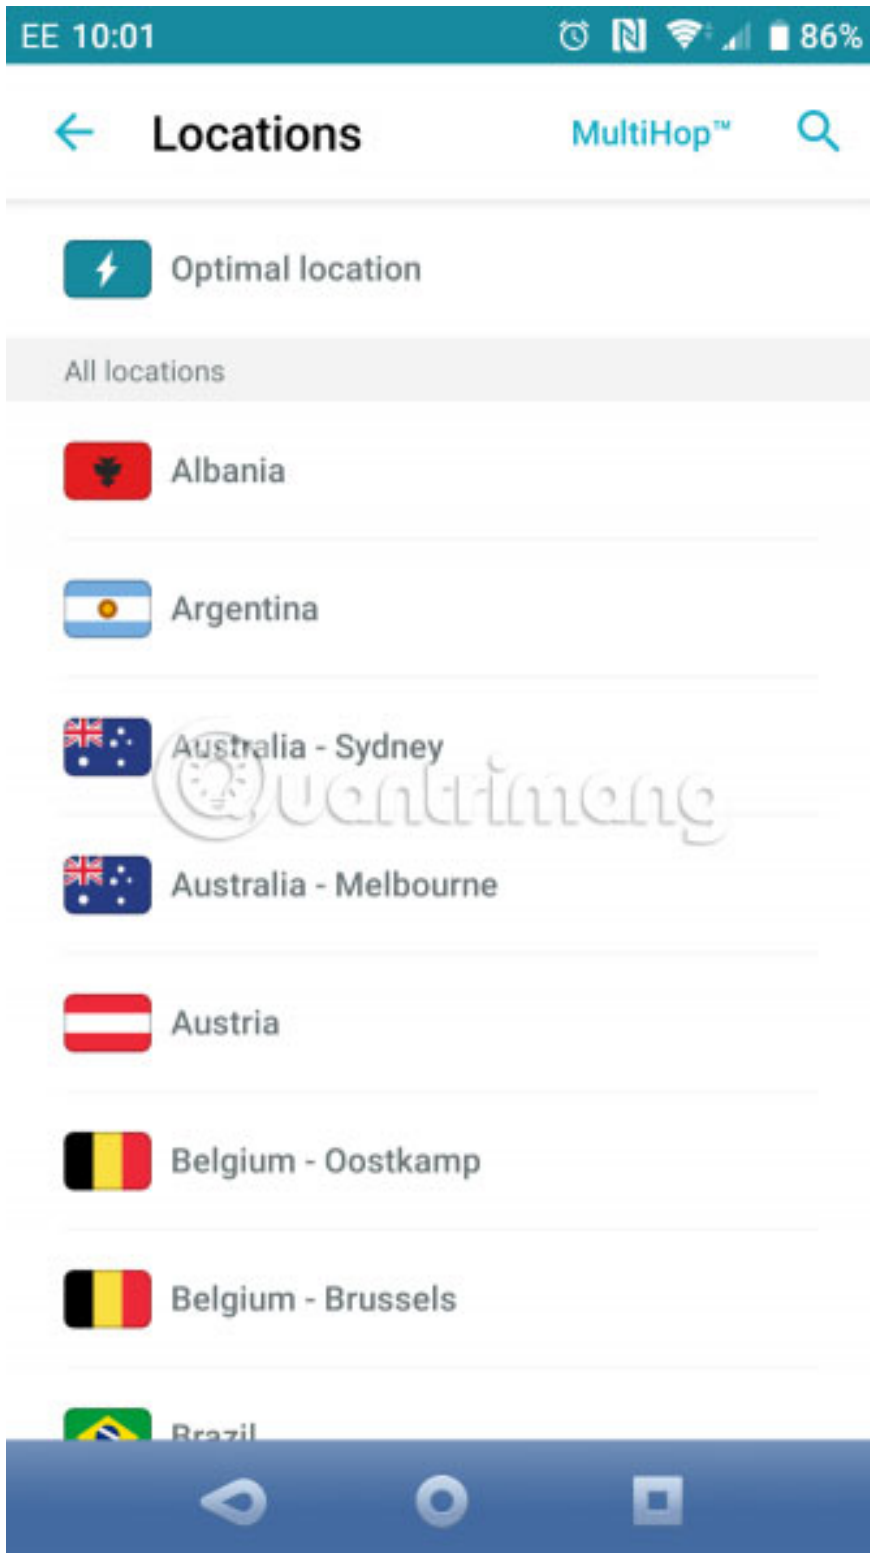

United Kingdom - Manchester

To prove this, the company brought up Cure53's independent web security testing tool to test browser extensions. Cure53 declared that 'very pleased to see such a strong security spirit'. Cure53 also offers common flaws of similar products related to privacy issues.

Note that when using browser extensions, VPN will only protect your browsing experience. Any Internet activity outside of the browser, such as torrent, will not be protected.

The router setup feature is also available for VPN-friendly routers, while OpenVPN support allows Surfshark VPN connectivity in Linux.

Do not stop there. Android support includes Android TV and Amazon Fire, which means you can also encode your online video playback experience on those devices. If you want to find a way to solve blocking issues in Netflix areas, you'll find this helpful.

VPN Surfshark also provides Smart DNS service for consoles and other devices, does not support VPN applications. For PlayStation and Xbox consoles, as well as Apple TV, Samsung TV and other devices, Smart DNS basically allows the device to appear as if it is in a different location. Although there is no encryption option, Surfshark can still support breaking Netflix blocking and other regional services.

Finally, Surfshark has a feature called MultiHop, which allows connecting across multiple countries at the same time. This feature increases the disturbance of your physical location, as Surfshark describes: 'Bringing the ID protection and hiding the user's real position to a new level'.

Set up Surfshark

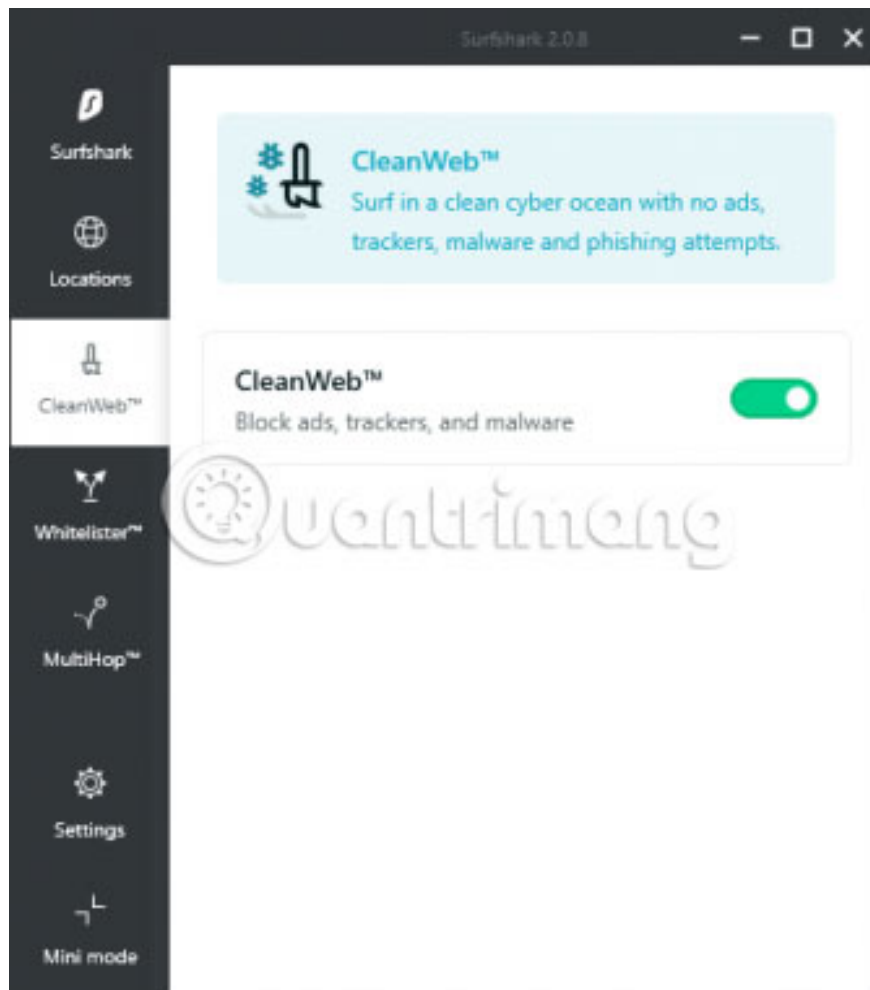

Whatever platform you use, VPN Surfshark is easy to set up. The article has tried Windows and Android applications to imagine what part you can expect when using Surfshark.

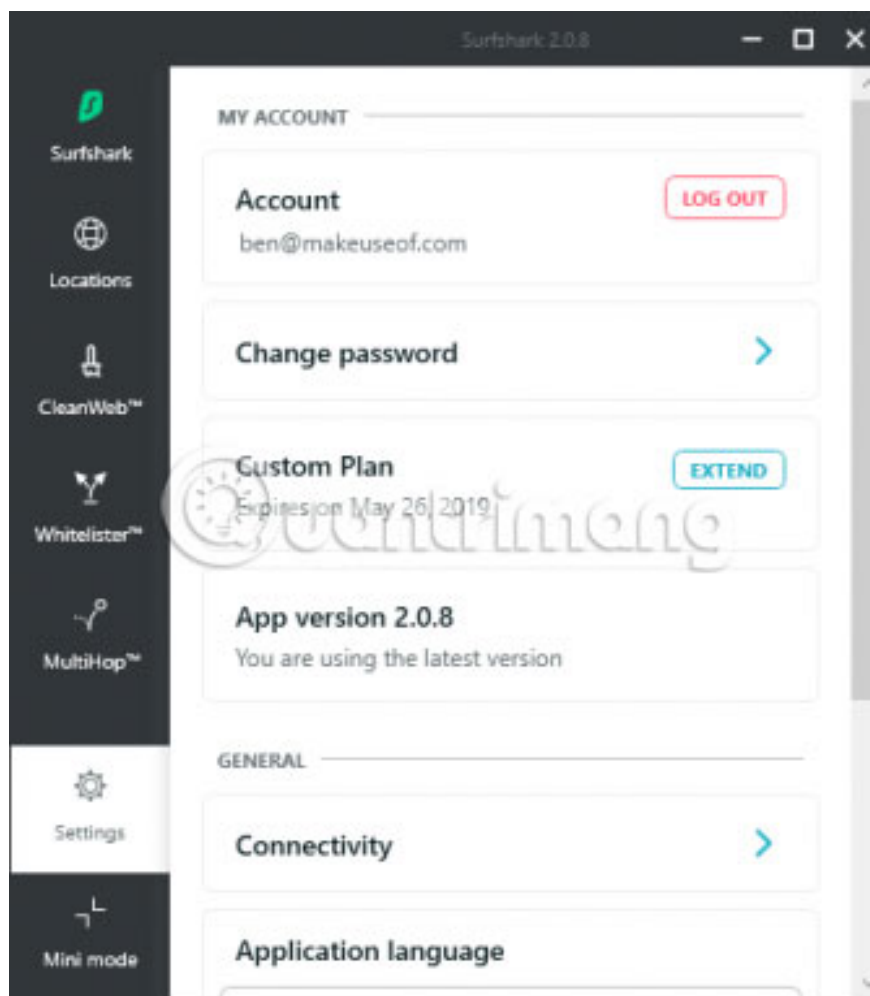

After installation, you can start by entering the login information used when creating the Surfshark VPN account.

First, you will have the option to connect to the nearest VPN service using the **Quick Connect** button. To select another server, open the **Locations** menu . This menu will show locations around the world that you can connect to. Note that the **Locations** menu also provides the **Optimal location** button to connect to the server that best suits your location and activity.

You will find recently connected locations in the **Quick Connect** menu .

From the application, you can easily access features like **CleanWeb** (to block the tracker and malware), **Whitelister** (to allow user-specific applications and websites to bypass VPNs.) and **MultiHop**.

You will also find many other settings that are adjustable, such as automatic connection management, enable Internet kill switches and set default actions for each WiFi network you connect to.

On top of that, Surfshark VPN runs in the background, only the occasional message reminds you that it is still active.

Encryption, without leaking DNS and logging

Most people use VPN because of two main issues: Encryption and anonymous logging. Whether the service has a DNS leak or not is a problem to consider.

Surfshark uses the IKEv2 protocol, which provides 256-bit encryption, is nearly impossible to crack, ensuring that online activity is completely private between the user's device and the VPN service.

Test complete

Query	round	Progress...	Servers	found
1			1

IP	Hostname	ISP
89.238.130.198	paran.diversitytell.net	M247 Ltd

Does Surfshark have DNS leaks? The article tested Surfshark with **dnsleaktest.com** and found that the service has hidden the IP address of the computer running the evaluation account. Another plus for Surfshark.

Meanwhile, the logging feature is ensured by the Surfshark VPN registration process taking place in the British Virgin Islands. This means that the server does not log in to sign your access and activity rights.

Whatever your decision is when you sign up for a VPN, we recommend taking the time to study its data logging policy. This will help you feel secure when signing up for the service.

With 256-bit encryption, access to worldwide Netflix libraries, torrent support, fast data rates and applications for all platforms, unlimited connections, etc. There seems to be no reason not to use Surfshark. Surfshark, endorsed by security expert Cure53, is a package that includes impressive online security tools and features.

Simple, easy to use and affordable, VPN Surfshark is a great option if you are new to VPN or are considering choosing another service provider.
