

Robots are identical to humans that are almost indistinguishable, causing confusion and fear

Fred made the customers of a bar in London to be satisfied. They are almost indistinguishable Fred is a robot or a human when talking to it.

Enginnered Arts (Cornwall, Canada) created an almost indistinguishable human-like robot. This robot has the name Fred and was created within 12 weeks.

Fred made the customers of a bar in London to be satisfied. They are almost indistinguishable Fred is a robot or a human when talking to it. While talking, this robot also mentioned a very frightening problem that many people are concerned about today is a person who overthrew people. And then suddenly, Fred was short-circuited and broke the glass in front of everyone so they couldn't help but panic and fear.

Can you distinguish who is a robot?

After learning, this is just a part of Now TV's advertising campaign for the new season of the fictional series about the Westworld robot, but the fact that Fred's robot is too similar also makes many people startled to realize the technology Creating robots has made remarkable progress.

In order to help Fred look like a human, the engineering team had to type hundreds of thousands of lines of code, along with tens of thousands of supporting components including metal skeleton, silicone skin, real hair, and specially created eyes. from real 3D printing technology.

Once completed, the team decided to take Fred to The Prince Alfred bar in west London to test and of course the results were not beyond their expectations.

It is the actor Tedroy Newell who must say that Fred is like he is looking at himself.
