

## Round your eyes with the magic virtual paper animal toys like magic

Designer Nakamura, Japan, has created paper folding works that transform the shape when the player gently presses or releases them to surprise everyone.

Designer Nakamura, Japan, has created paper folding works that transform the shape when the player gently presses or releases them to surprise everyone.

Nakamura used kirigami, an amazingly varied and multifarious paper cut art from Japan to create unique transformative paper folding works that have 1-0-2. If Origami, also known as paper folding - one of the famous traditional arts of cherry blossoms, does not allow players to use anything but paper, with kirigami, players can comfortably light create with other support tools such as drag and paste to create shapes.

Most paper collage works have only one shape, but Nakamura has created works that can transform when touched. The secret behind these unique works is karakuri, a division that helps them change their shape.

The works of Haruki Nakamura are very impressive with the papermakers and are popular. His works are also on the market and are priced quite cheap, with prices ranging from 500 yen to 1,000 yen per work.
