

Run Android on a computer without installing emulator software with Windows 11

Windows 11 operating system has just been launched by Microsoft with a lot of great improvements in terms of interface and features. Now, Windows 11 users can run Android without any emulator software.

Prominent among them is the fact that Windows 11 can run Android without having to use emulators.

On Android 11, Microsoft has partnered with Amazon to bring the Amazon app store into the Microsoft Store. As a result, Windows 11 can run Android applications right on the computer without the emulator software like before. Users only need to find and install the application on the Microsoft Store.

Windows 11 users can now run Android apps. Of course, the operation is still no different from the experience on smartphone devices, such as the TikTok application in the image above. Currently, Windows 11 only supports a few applications available on the Amazon app store. In the future, there will certainly be many more popular applications added by the company.
