

Rushing to buy laptop insulation equipment for 'baked leather syndrome'

Market for 'hot' laptop insulation devices due to user information may be affected by the skin when placed on a lap for use.

The market for insulation equipment for " hot " laptops is due to user information that may be affected by the skin when placed on a lap for use.

A recent study by Swiss scientists showed that placing laptops on a lap for hours can cause skin discoloration due to the heat of the computer during the process of radiating. Researchers call this " **baked skin syndrome** ".

The temperature below the computer when operating is about 52 ° C while only 44 ° C and above is skin contact with the computer may have this syndrome. Then the skin will turn brown and may permanently discolor, even cause skin cancer if used continuously for a long time.

" *Grilled skin syndrome* " makes consumers more interested in radiator products for computers.

Information " *baked skin syndrome* " is very interested because the use of laptops in Vietnam is quite a lot. Due to the high mobility, many people, especially young people and office workers, bring their computers to use wherever they are, and the position to place laptops on the thighs is very popular.

Minh Hung, a media officer in Ho Chi Minh City, said: " *Although I still don't know the authenticity of this issue, I also feel a bit uneasy because I often leave my computer on my lap when going out So I went online to learn about the types of insulation for laptops, to buy one to be safe .* "

And Bao Chau, a student, confided: " *I often use a laptop on the campus or sit at a coffee shop so it is normal to put the machine on my lap. When I know this information, I am surprised because I am also looking to buy a radiator base to avoid baking skin syndrome .* "

The heat sink for laptops has many types.

On the market there are many brands of heat sinks with rich designs with prices from 50,000 to million VND with computer cooling features, protecting skin from direct contact with laptops. Mr. Thanh Hien, a salesman of a computer company at Bui Thi Xuan Street, commented that the number of customers asking for information and buying aluminum, mica or plastic radiators in these days has increased. .

According to representatives of a number of online buying and selling sites, previous radiator products were rarely interested. But since the information of " *baked skin syndrome* ", the volume of this product has skyrocketed. The type is bought a lot of stylish laptop racks, ultra-compact laptop table combined with laptop speakers ., the price depends on the brand, good type up to 1.5 million. These are simple but effective solutions for protecting consumers' health as well as increasing the life and performance of computers.
