

Samsung Galaxy S10 will be one of the first Wi-Fi 6 smartphones in the world

According to a report from Samsung's Droid Life flagship Galaxy S10 will be one of the first smartphones to support the Wi-Fi standard 6.

According to a report from Droid Life, Samsung's flagship Galaxy S10 will be one of the first smartphones to support the Wi-Fi 6 standard, giving a fast Internet connection speed. In addition, the Droid Life also revealed that all three upcoming Galaxy S10 models will be supported with this technology.

Actively equipping new technology on the product is a good thing, very praiseworthy for Korean manufacturers, but the feasibility and practical use of Wi-Fi 6 is still a sign. ask big. For a simple example, at present, Wi-Fi 6 routers are still too rare, while you will need such a router to take advantage of the improvements of this technology, so it can be said that the ability to use The practical use of Wi-Fi 6 is almost zero, at least until the end of the year. In addition, Wi-Fi 6 is not actually designed to increase the connection speed for each individual device, which is geared toward improving the performance of home Internet or on systems. Large Wifi networks, where dozens, even hundreds, of thousands of devices are connected at the same time (assuming a home is installed with many smart home devices, for example), and are, of course, devices. It will also need to support Wi-Fi 6 to really see the effect.

1. Will Samsung launch a foldable gaming phone?

However, it must be said again, Wi-Fi 6 is an interesting feature, and its appearance on a cult device like the Galaxy S10 will mark an important milestone of Internet connectivity for devices. Mobile, and will most likely start a "new arms race" in the smartphone world, and also contribute to popularizing new technology to the public. As mentioned, until now, there are not many devices that support Wi-Fi 6 standard in the world, but with the support on Galaxy S10, we can completely believe in a future. promising of this technology.

Going back to the Galaxy S10, this phone is likely to be powered by Qualcomm's top processor, the Snapdragon 855, which shows that the chip can perfectly support Wi-Fi 6. And Because the Snapdragon 855 is Qualcomm's flagship chip, it is widely used on other top-of-the-line Android smartphones, leading to the fact that these smartphones can also support Wi-Fi 6.

1. Samsung will launch a 1TB memory chip for smartphones, will it appear on Galaxy S10?

Samsung is expected to officially announce its flagship smartphone for the first half of this year, Galaxy S10 later this month, including the standard S10, the larger S10 Plus, the cheaper S10E, and more likely all three models. will support 5G standard.
