

Samsung Galaxy S24 Ultra could be the smartphone with the brightest screen in the world

According to the latest revelation from technology expert itnyang, the Galaxy S24 Ultra may be the smartphone with the brightest screen ever, with a brightness of 2200 nits or more.

Earlier rumors also said that the Korean tech giant is testing different panel prototypes for the Galaxy S24 series in general and the Galaxy S24 Ultra in particular, with screen brightness ranging from 2500 nits to 2800 nits. The same is confirmed by leaker IceUniverse, who is famous for his highly accurate comments about upcoming technology products.

However, it is too early to comment on the authenticity of such information. In fact, such high screen brightness, although it can be an effective marketing aspect, has a big impact on battery consumption and will almost only be offered when the device possesses some features. special. The Galaxy S24 Ultra is expected to be equipped with an OLED panel called M13, similar to the code that is said to appear with the iPhone 15 Pro models.

In addition to the screen information, many other features of the Galaxy S24 Ultra have also been leaked. Accordingly, Samsung's flagship smartphone model is expected to be equipped with a 200MP main rear sensor, a 12MP ultra-wide sensor, a 50MP telephoto lens, and a 10MP telephoto lens with 10x optical zoom.

The standard Galaxy S24 is expected to ship with a 4000 mAh battery, the Galaxy S24 Plus will have a 4900 mAh battery, and the Galaxy S24 Ultra will have a 5000 mAh battery. According to this year's model, the Galaxy S24 could ship with a dedicated Snapdragon 8 Gen 3 SoC built on a 4nm process.

If nothing changes, Samsung will officially launch the next flagship series early next year, including 3 models: Galaxy S24, Galaxy S24+ and Galaxy S24 Ultra. As usual, S24 Ultra will be the most advanced variant, owns the

best technology of Samsung at the time of launch.
