

Samsung is about to launch a smartphone running KitKat for under \$ 100

Samsung may be about to launch smartphones with super cheap prices but will run the new version of Android OS KitKat immediately upon delivery. This smartphone is codenamed SM-G110B.

Samsung may soon be launching a "super cheap" smartphone but will run the new version of Android OS KitKat immediately upon release. This smartphone is codenamed SM-G110B.

Although the SM-G110B has not been announced yet, some information on the device's profile has been posted on Samsung's homepage. Accordingly, the product SM-G110B will own QVGA screen, 240 x 320 pixel resolution, running Android 4.4.2 operating system and using a 1 GHz clock processor, it is unclear which is the processor single core or dual core.

Meanwhile, according to information from *Zauba* , a website that tracks India's import and export activities, the screen of the SM-G110B is about 3 inches in size. According to analysts, Samsung should put the SM-G110B into the "*Galaxy Pocket family*" . The newest member of this line has just launched last summer, *Galaxy Pocket Neo* with a 3-inch screen and a price of about 80 USD.

Currently, information about the launch time and the markets to be released SM-G110B has not been announced by Samsung. However, it is likely that Samsung will launch this low-cost device in emerging markets. The price of the machine is expected to be under 100 USD.
