

# Samsung is working on creating a wireless charging wall, the devices fully charge themselves when in the room

The prospect that when you step home is a phone, tablet, smartwatch ... will automatically be wireless charging, probably will become true in the future because Samsung has started registering copyright to Research creates wireless charging walls.

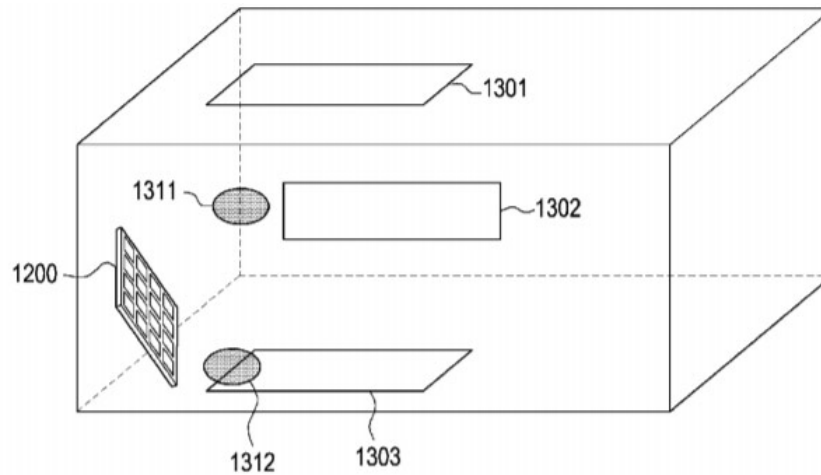

The prospect that when you step home is a phone, tablet, smartwatch . will automatically be wireless charging, probably will become true in the future because Samsung has started registering copyright to Research creates wireless charging walls. At that time, just stay in the room, the electronic devices are automatically fully charged.

In fact, in the copyright registration of Samsung talking about the study of creating walls that can reflect the energy waves emitted from a wireless charging device in the room, not mentioning a wall Can charge wirelessly at all. This reflected energy wave will be directed at your electronic device and thereby help charge them no matter where in the room.

Images in Samsung's copyright registration.

Currently, most electronic devices use battery charging wire quite ambiguously. Wireless charging technology is still quite new, has only been used for some specific devices and must be used to charge a charger (put the phone to charge into this device).

A wireless charging device and reflectors mounted on the wall.

Compared to creating self-broadcasting walls for charging electronic devices, the walls that are capable of reflecting this energy wave are more appreciated by its simplicity and economy. It is hoped to open a revolution in the technology world.

And if this kit is complete, the scenario when you just enter the room, your phone will be charged even if it doesn't need to be removed from the bag will not only be a distant dream anymore.
