

Samsung launched the 43-inch Sero TV, which can be rotated horizontally like a smartphone

At CES 2020, Samsung launched the very special 43-inch 4K Sero TV, capable of rotating vertically like smartphones, allowing users to watch videos on social networking platforms.

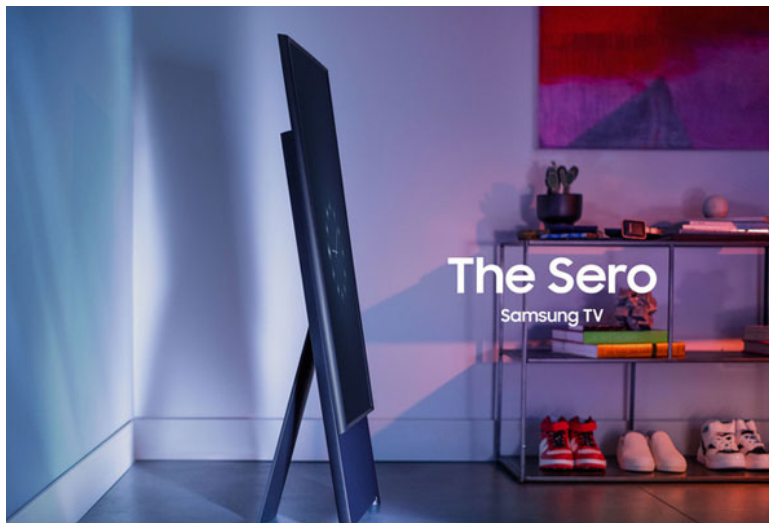

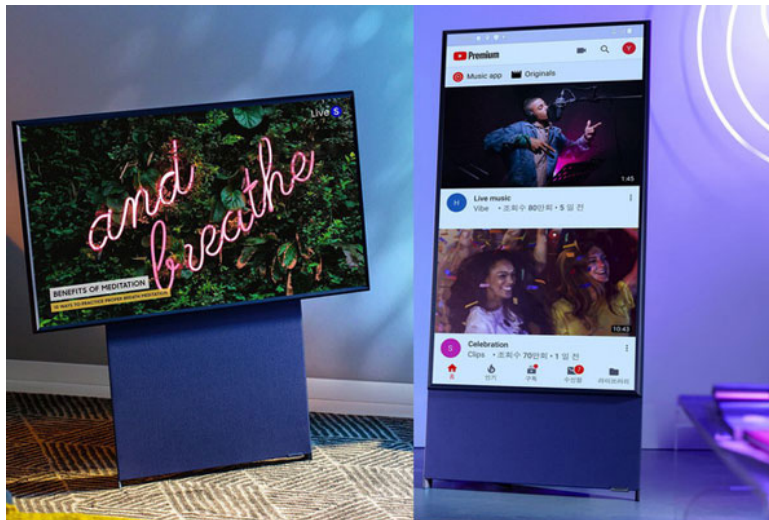

At CES 2020, Samsung launched a special TV called the 43-inch 4K Sero TV, capable of rotating vertically like smartphones, allowing users to watch videos on social networking platforms such as Facebook, Instagram or new. This is TikTok without being bothered by 2 long black on the sides.

Samsung has designed a non-removable smart stand to help Sero TV rotate vertically. The base unit has a built-in 4.1 60watt 4.1 speaker system, which makes it sound louder than a standard flat-screen TV.

The stand is designed quite high so the TV does not touch the ground when turned vertically. The monitor and base are always attached, so the TV cannot be hung on a wall.

Normally, users can set the default TV in landscape mode. When you want to watch vertical format videos, the screen of the Sero TV will automatically rotate vertically gently. Meanwhile, the displayed content will automatically turn into a vertical screen similar to that on a smartphone. If desired, users can also easily transfer content from the smartphone screen to this special Samsung TV.

This is the first time the famous Korean brand has announced this special TV on the international market, before it introduced Sero TV in their home country. The selling price of Sero TV is \$ 1,600. Samsung has not disclosed the launch date of this product.

1. Dell launches a 42.5-inch 4K computer monitor for VND 24 million
2. Acer ConceptD 7 Ezel, 4K rotating flip screen, NVIDIA GTX GPU, priced from \$ 2699
