

Samsung launches true wireless headset AKG N400: Active noise canceling, water resistant

Samsung AKG N400 is the perfect replacement for Galaxy Buds +, adding many valuable features, especially active noise cancellation technology.

After the launch of Galaxy Buds + at Unpacked 2020 held in February, Samsung recently introduced a new True Wireless headset model called AKG N400, currently sold for \$ 190 (about 4,5 million).

Although it comes with a retail price that is about \$ 40 more expensive than the Galaxy Buds +, Samsung's new AKG N400 wireless headphones are adding more valuable features, especially technology. Active noise resistance and water resistance.

The AKG N400 is still an in-ear headset, with a design that is not much different from the Galaxy Buds +. It uses 8.2mm driver with the ability to meet 10Hz - 20KHz audio frequency, impedance of 16 ohm and sensitivity of 96dB SPL.

Samsung's new True Wireless headset uses Bluetooth 5.0 connectivity, supporting SBC and AAC codecs. The product comes with 3 sets of rubber buttons with different sizes, helping users to choose and replace accordingly, thereby bringing the most comfortable feeling to use.

The most prominent highlight on the AKG N400 is active noise cancellation (ANC) technology. With Ambient Aware, you can listen to music while listening to sounds from your surroundings. Meanwhile, the TalkThru feature automatically adjusts the music playing volume to the lowest level, allowing users to talk freely with people without having to remove the headset.

Each earpiece of AKG N400 is equipped with 2 microphones, using beam format technology to bring better sound quality when making calls. In addition, they also have integrated touch keys, allowing users to control the music player and volume easily with just a few taps. You can even activate Bixby, Siri or Google Assistant on your smartphone with the headset.

The AKG N400 wireless headphones can provide up to 6 hours of use after a full charge, as well as 5 hours if active noise canceling (ANC) is enabled. Meanwhile, the charging case can fully charge the headset once, increasing the total battery life up to 12 hours.

Users can charge the AKG N400 via USB Type-C port or use wireless charging. In terms of weight, each ear weighs 7.7g and the charging case weighs 65g. The product currently has three color options: Black, Gray and Blue.
