

Samsung may disappoint a lot of users because of the Galaxy Note 20

The Galaxy Note 20 will likely be very similar to the Galaxy S20, which won't have many innovations and differences.

Samsung has launched three new high-end flagship smartphones, the **Galaxy S20**, S20 Plus and S20 Ultra. In particular, the most notable is the 'monster' Galaxy S20 Ultra, with very strong performance, integrated with many technologies and especially impressive cameras. However, due to the effects of the Covid-19 epidemic, sales of the Galaxy S20 trio did not really reach as expected.

Now, all eyes are on the next flagship smartphones, which Samsung will launch in the second half of this year. No one else is the Galaxy Note 20. However, according to the latest leaked sources, Samsung may disappoint a lot of users because of the Galaxy Note 20. Because this smartphone is basically the same as the Galaxy S20. now on.

Ice Universe and Max Weinbach, the two experts who revealed the news with great accuracy, both said that the Galaxy Note 20 will have many similarities to the Galaxy S20. *'The Galaxy Note 20 will not have many significant changes compared to the S20. Basically, this will be an S20 with an S Pen and more square corners.'*

The similarity between the S series and the Note series is something we can all see in previous generations. However, Samsung changed that last year. As the S10 and Note 10 have a lot of differences, especially the design and rear camera cluster.

However, Samsung will not continue to do that this year. It won't be surprising to see that the Galaxy Note 20 has a perforated screen, with a selfie camera in the center, a rectangular rear camera cluster.

Galaxy Note smartphones usually have larger screens than the Galaxy S. However, with the Galaxy S20 Ultra, the screen size has reached 6.9 inches. The Galaxy Note10 +, on the other hand, only has a 6.8-inch screen. So even the difference in screen size may be gone.

The only motivation for users to choose the Galaxy Note 20 over the Galaxy S20 Ultra, is probably just the S Pen. So let's wait and see, Samsung will use what tactics and whether any miracles happen or not?
