

Samsung released a new 13-inch and 15-inch 'MacBook Pro' model

An unbelievable similarity.

Well you don't read the wrong head! Samfan please calm down, this product of Samsung is too similar to the MacBook Pro, so similar to believe.

Right next to WWDC 2019, Samsung has once again made the whole technology world share their attention when it comes out with a few new laptop models, but it is worth mentioning that they own the The similarities are too big for rival rival MacBook Pro in terms of design language. Specifically, the new laptop comes out of the manufacturer Kim Chi, named Notebook 7, and it is clear from the name that Samsung has made no secret that the new product is "inspired" by Apple's most advanced laptop model at the present time.

1. Invite to admire the series of ultra-unique dual screen laptop of the big guys in the technology village

Samsung Notebook 7 runs Windows 10 (of course), and will also have two 13-inch and 15-inch versions, each of which carries the same features and design features as the MacBook Pro. They have edges that are toughened with diamond, large-sized touchpads and a thin screen border, similar to 'brother' running on macOS. In addition, Samsung is also showing its care and perfection by taking care of extremely small details such as: Fonts used on keyboards and wallpapers are the same as those of the MacBook Pro, and even There is also a wide dent made into the metal frame of Notebook 7 to make it easier for users to open the screen.

More specifically, in both models of Notebook 7, the 13-inch version possesses the closest resemblance to Apple's MacBook Pro from the layout of the keyboard, touchpad and yes, almost no difference. big For the 15-inch version, the design will be a little different with the addition of a numeric keypad (15-inch MacBook Pro with no numeric keypad), which pushes away the letter keys and the touchpad to the left, overall is relatively harmonious.

1. Apple launched the MacBook Pro upgrade with many notable options

The difference is obvious, and also the plus point of Notebook 7 compared to the MacBook Pro, unlike Apple's products, the Samsung-branded laptop possesses a myriad of useful connections, including 2 USB 3.0 ports, USB-C port, HDMI and microSD card slot. So, with Notebook 7, you won't have to use extra removable dongles to connect the device to an external monitor or some other type of accessory - although it can't connect via Ethernet.

This new model from Samsung is expected to be priced starting at \$ 999.99 and officially available at the home of the MacBook Pro - the US market on July 26 on Amazon as well as Samsung's own online store. Both 13 and 15-inch versions are equipped with the 8th generation Intel Core processor (including the standard version), 8GB of RAM, 1080p screen, and fingerprint sensor (in the form of blue keys on keyboard). Particularly, the 15-inch version will be added with an optional package with discrete graphics Nvidia's GeForce MX250 to replace the built-in Intel GPU, and also has the option of upgrading to SSD storage, if you need it. Improve the speed of the product.

1. 2019 Asus Vivobook, popular laptop with super high-speed SSD 512GB SSD storage, priced from 11.99 million

In addition, at the launch of the product, Samsung also unveiled another new laptop model, called Notebook 7 Force (15 inches). It looks similar to the 15-inch Notebook (and so can be considered 'brother' to the MacBook Pro), but in this case, you can compare Notebook 7 Force with the Razer Blade for production. This product is also black only.

Notebook 7 Force is priced at \$ 1,499 and the reason for the price increase is the participation of Nvidia's GeForce GTX 1650 graphics processor (replacing the last generation GTX 1050 GPU and is also said to be powerful and power-saving. more powerful), default 16GB RAM, Ethernet port and two additional slots that allow for extra storage space.

So with the above configuration, it can be seen that Notebook 7 Force is a relatively suitable product for intensive tasks such as video editing or gaming and perhaps this is also the main purpose of Samsung when launching. this version. Of course, we still can't see the actual performance of this product yet, but at \$ 1,499 price, Notebook 7 Force is much more expensive than some notebook models. hands cost under \$ 1,000 but still own GTX 1650 GPU (or even better). Another thing to keep in mind, at nearly \$ 1,500, Notebook 7 Force's 43Wh battery is too small for competitors of the same segment or even in the lower segment. Therefore, if you often have to work with heavy tasks that require processing power of discrete graphics, do not expect a good time to use. Making a simple comparison, Apple's 15-inch MacBook Pro is equipped with a 83.6Wh battery, so you can refer to the 15-inch MacBook Pro's battery life for the approximate time used for Notebook 7 Force.

1. The laptop contains six of the world's most dangerous malware being auctioned, starting at \$ 268,000
