

# Samsung Series 7 runs Ivy Bridge chips for pre-order

It was not until June that Intel started selling Ivy Bridge chips, but now users can order laptops using this processor.

**It was not until June that Intel started selling Ivy Bridge chips, but now users can order laptops using this processor.**

Samsung Series 7.

Just a few days after Intel announced it would be able to launch a new series of processors using the Ivy Bridge platform in June, Samsung's Series 7 computer model would allow it to use the chip. . J&R retailer lists the NP700Z7C-S01US " Nike " model with a 17.3-inch screen that will run the Core i7-3615QM processor at 2.3 GHz.

Core i7-3615QM has four processing cores and belongs to the 3rd Intel Core generation code named Ivy Bridge. This device has a speed of 2.3 GHz but has a maximum speed of 3.3 GHz with Intel Turbo Boost technology.

Other hardware features for this model include 8 GB RAM, 1 TB hard drive and LED backlight screen with a resolution of 1366 x 768 pixels. This system uses motherboards with built-in 8GB flash memory chips for

hardware acceleration. This model is currently priced at US \$ 1,500 but it is unclear when it will be shipped.

Model Ivy Bridge chips using 22nm technology feature tri-gate 3D transistor technology that enables energy savings of up to 37% as well as improved graphics performance. Intel has promised that these laptops can be used all day and the waiting time is up to 10 days.
