

Samsung Series 9 screen is comparable to Retina

On August 31, the media said, Samsung has brought to the IFA trade show taking place in Berlin, Germany latest laptop product Series 9 is remarkable.

On August 31, the media said, Samsung has brought to the IFA trade show taking place in Berlin, Germany latest laptop product Series 9 is remarkable.

The most prominent feature of the Series 9 laptop is the high quality screen comparable to the Retina display that Apple equips with MacBooks.

According to media, the Series 9 model uses a 13-inch screen with a resolution of up to 2,560 x 1,440 (221 pixels / inch), while Apple's new MacBook Pro is equipped with a 15-inch screen with a ratio. 220 pixels / inch.

Although it is outstanding, a strange thing is that Samsung does not provide much information about Series 9, in addition to displaying this product.

Therefore, it is not clear when the Windows 8 laptop model will be released by Korean technology company, and for how much it will cost.

The media became more and more curious because they still didn't know what Samsung would call their *'terrible'* display technology, as well as the machine configuration details that were worthy of the high-quality screen.
