

Samsung suddenly launched a 'mysterious' support application on the Microsoft Store

Samsung has quietly introduced a brand new application called Samsung Mobile Broadband Testmode on the Microsoft Store.

According to some Github members, Samsung has quietly introduced a completely new application called Samsung Mobile Broadband Testmode on Microsoft Store with only a very brief description: 'CM tool for Windows 10'.

The app is in the developer utility category, and initial testing shows it can be installed on Windows 10 versions 17763.0 or higher and Xbox One, but is not compatible with Surface Laptop. 2 of Microsoft. According to experts, this is probably an application designed to help users of Samsung smartphones and tablets manage devices and make calls right on the Samsung Windows 10 PC, similar to the Your application. Phone of Microsoft.

Going into the analysis of a little descriptive information, Samsung said that this is a CM tool for Windows 10. CM (Configuration management) is a tool designed to support changing the current state of the system. to a predefined state. In other words, this is a tool to support, configure, install the system automatically . with the advantage of simplifying system deployment, limiting repetitive steps and saving time.

Also according to Samsung's introduction, Samsung Mobile Broadband Testmode will support ARM, x64, x86 architecture, meaning that this application can run on PC Snapdragon if Samsung plans to launch ARM PC models in the future.

If you are using a Samsung PC running Windows 10, you can download the Samsung Mobile Broadband Testmode application using the link below, or you can directly visit Microsoft Store and learn more about the application. Tell us about your latest Samsung Mobile Broadband Testmode in the comments!

Download the Samsung Mobile Broadband Testmode application.
