

Samsung users can remove the virtual key on the screen if they do not like it

On the Galaxy A7, Samsung has provided a new option that allows users to completely hide new navigation keys and replace them with swiping operations.

The new Infinity Display design language along with new navigation keys (Home, back, and recent apps) in the screen have been applied by Samsung on their devices. from the Galaxy S8 onwards. But on the new Galaxy A7, Samsung has eliminated the virtual key strip, perhaps because these navigation keys will take up part of the screen of the device.

Previously, on Samsung devices, users could press twice on the small dot image in the navigation bar in the corner of the screen to hide or show the navigation bar. This allows users to use more screens but when using the functions, they still have to access the navigation bar by swiping up from the bottom of the device.

On the Galaxy A7, Samsung has provided a new option that allows users to completely hide these three keys and replace them with swiping operations. Specifically:

1. Swipe up from the small tile on the left will activate the "recent apps" navigation key.
2. Swipe up from the tile to go back.
3. Swipe up the tile in the middle to return to the home screen (Home)

< NAVIGATION BAR

Button layout

Recents - Home - Back

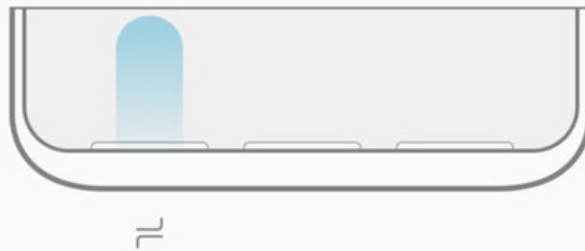

Show and hide button

Add a button to the left side of the navigation bar to show or hide the navigation bar.

SWIPE UP ACTION

Select what you want to happen when you swipe up from the bottom of the screen while the navigation bar is hidden.

Show navigation bar

Home, Back, and Recents actions

Gesture hints

Show where to swipe up when the navigation bar is hidden.

As expected, Samsung will also bring this feature to Galaxy phones with Infinity Display screens in the near future.
