

# Saudi Arabia built a \$ 500 billion super city spread across three countries, 33 times larger than New York

Saudi Arabia has just announced a project to build a super city named Neom, which will spread across three countries with a large area of 33 times the size of New York City of America and completely run on renewable energy.

Saudi Arabia has just announced a project to build a super city named Neom, which will spread across three countries with a large area of 33 times the size of New York City of America and completely run on renewable energy.

1. The most remote and least-populated places on Earth
2. 7 underground works overwhelmed you
3. Close up of the scene of the horrifying explosion of the super volcano, engulfing the whole city

The super city covers an area of about 26,500 km<sup>2</sup>, funded by the government and private investors. Neom is expected to be the bridge between Jordan and Egypt, which will expand the Saudi economy and reduce its dependence on oil exports. The city will also focus on developing many industries such as energy and water, food, biotechnology, smart manufacturing and entertainment.

This project can make Neom one of the largest cities in the world to operate entirely with renewable energy . Currently, there are cities in the US that do not use fossil fuels such as Burlington, Vermont but cannot be as

large as Neom.

As expected, the first part of the city of Neom will be completed by 2025.
