

How to take screenshots in BIOS

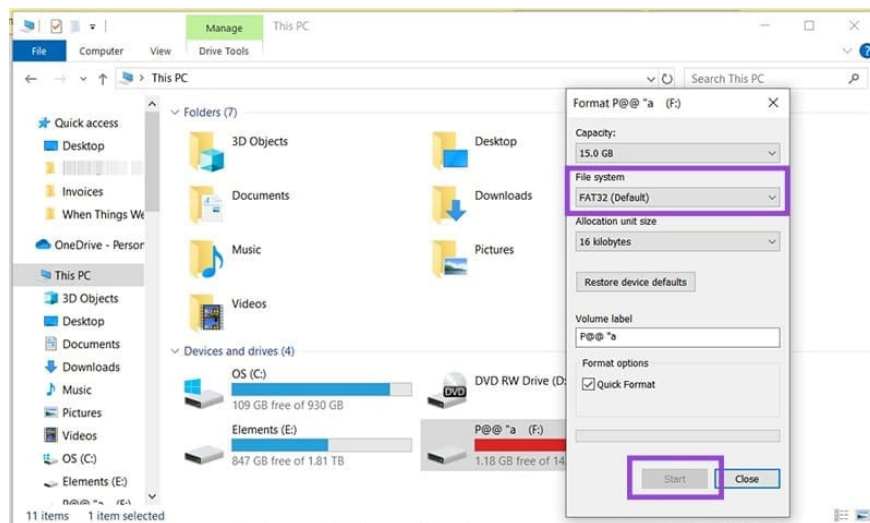

Windows doesn't support you any keyboard shortcuts to take BIOS screenshots, but you can follow the instructions below to take BIOS screenshots.

Taking a screenshot of your computer screen is very simple, you just need to use the shortcut key to take a photo. However, to take a screenshot in BIOS, you need to do more steps. Basically, Windows does not support you with shortcut keys to take a screenshot of BIOS, but you can follow the instructions below to take a screenshot of BIOS.

How to take screenshots in BIOS

Step 1:

Prepare a blank USB and format it to run in BIOS. Connect the USB to the computer, then right-click and select Format in the displayed menu. In the displayed menu, in **File System, select FAT32 (Default)** and then **click the Start button** below. Then click OK to reformat the drive.

Step 2:

Restart your computer and then press the BIOS access shortcut key depending on your computer.

Step 3:

Once you're in the BIOS screen you want to take a screenshot of, press the Print Screen button (or F12, F10, or F8 on some computers).

A new message will appear asking where you want to save the screenshot, select USB if BIOS supports it. The image will be saved as a '.bmp' file.

Then the computer restarts as normal.
