

# Sea snails 'disguise' the crust into an image like the Milky Way

By taking advantage of the outstanding colors available, with the same disguise and disguise, a clever sea snail has spectacularly set up on its hard shells, making the diver look extremely stunned.

By taking advantage of the outstanding colors available, with disguised disguise, a clever sea snail has breathtakingly set on its hard shells, making divers look stunned. The incident was discovered just below the night seabed off northeastern Taiwan.

The discovery shows that a typical sea snail of the area called Cowrie sea snail suddenly disguised as an unexpected sight on a giant hard shell. According to experts, this camouflage scene is no different from the Milky Way galaxy seen in our skies.

Enlarge the picture shows that there are hundreds of different large and small spots that are dense on the crust, each of these spots has a different color, such as white, orange, yellow and brown. .

More specifically, all the blobs have the ability to glow properly with the color it has, creating a spectacular glowing scene, setting up battles on a giant hard shell. In detail, this bright spot system looks like constellations,

stars in the sky we often see at night .

' *At first sight, the stereotypical Cowrie snail product on the shell reminds me of a starry sky in the Milky Way galaxy, which is a spectacular, spectacular spectacle of the natural world .* '- Nature photographer Wesley Oosthuizen, who directly captured the scene, said.

Many people commented, this sophisticated staging scene looked like the night beauty of a city on some lights on Earth viewed from the ISS space station.

Marine biologists say that the motive of this sea snail's sophisticated staging could come from its desire to deceive the sight of predators at night.
