

## Secure laptop with face

If Fujifilm and Canon put the face recognition feature into the camera, Lenovo launched a software based on this technology to add another layer of security to the laptop.

**If Fujifilm and Canon put the face recognition feature into the camera, Lenovo launched a software based on this technology to add another layer of security to the laptop.**

Similar to face detection technology in digital cameras is to automatically detect and focus the face, Lenovo Veriface software on the Y300 laptop to help increase a more secure laptop when users log in. into their laptop.

Lenovo's Y300 laptop comes with Core 2 Duo processor, 13 "screen and security with face detection.

The built-in 1.3 Megapixel webcam in the Y300 will calculate the distance between the eyes and nose, as well as special facial recognition points. After that, it will compare with a standard digital map of your own face saved in the machine in advance, to allow you to log in to the machine, a type of spy-type login with the alias 007 - James Bond.

Everyone knows that Bond is famous for many enemies and is always willing to pay a lot of money to counterfeit terrorists in order to access Bond's information. If, however, those who accessed the confidential documents of others had failed, they were now more helpless because Veriface's software added a barbed wire fence to private information on the computer.

And if the future of digital camera manufacturers also has this security feature for digital cameras, it will reject anyone who is not allowed to use it.
