Smart mobile devices help users work anywhere, but they need a security solution. *Illustration*

Check Point said it is the first time it has put Vietnam on the list of countries that host Security Tour - a cyber security event held annually by Check Point. This proves that Check Point is evaluating Vietnam's market for information security products and solutions.

At Check Point Security Tour 2010, the company introduced a number of new security solutions, such as Check Point DLP, to help prevent corporate information leakage; Check Point Endpoint Security provides customers with comprehensive solutions to protect computers and sensitive data on computers; Check Point Software Blade - blade-like security network architecture, offering customers a comprehensive, simple and flexible network security solution; Check Point Abra - a USB device with 4GB or 8GB of flash memory, reading and writing data from this device is encrypted and decoded by an internal hard-coding chip, which helps the data stored in memory lost. Users can connect Abra to the USB port of any computer, a Windows screen pops up with shortcuts and documents like users using a new computer, programs on the computer do not interfere. be on the

screen to do this.

According to Mr. Derrick Ng, Regional Sales Manager of Check Point, today the work is no longer limited to the scope of an office that regularly moves with laptops, cell phones or aids help digitize mobile. Therefore, users need a good security system, protecting them from Internet attacks.

In Vietnam, Software Development and Technology Support Joint Stock Company (MISOFT) is the official distributor of Check Point products and solutions.
