

See close-up of nightmare computers for every warranty worker

Take TipsMake.com to watch the close up of the most terrible computers, the nightmare of every warranty staff!

Once again on Reddit and the Internet revealed to us images of so-called " *horrible* " dirty computers that repairers and warranty workers look at when they are " *panicked* ".

Even recently, on the Reddit forum, there is also a special topic " *r / dustypcs* ", where the members show off their photos and some videos on Youtube about their super dirty computers. These photos and videos are really the obsession of the technical staff but there are many people who like to sit and watch these dust-and-mold-covered computers.

Only less than 2,000 people watched but " *r / dustypcs* " on the Reddit forum is no longer a strange place for subreddits - where technical people and computer enthusiasts post pictures of clean computers , their pristine and beautiful, like the subreddit " *r / battlestations* " , has more than 450,000 followers.

The category " *r / dustypcs* " updates new images quite often, which means " *dirty* " computers - things that people want to see more. Please join the Network Administrator to see the dusty personal computers below:

We are often reminded by technical staff **to clean computers regularly** to ensure they work best. However, not everyone remembers this reminder or because some people are too lazy to clean their computer every few

months.

Surely, people will wonder: " *What will happen if we don't clean the computer for a long time?* ". It is strange that many people like to watch dusty computers that are often called " *dust porn* ".

These " *super dirty*" computers have a strange attraction!

This dirt is like a work of artifact attached to a radiator fan.

Perhaps people will have an indescribably satisfying feeling when they see the image before and after cleaning the machine.

Photo source: YouTube / CompCenter

However, most of the articles were posted on the r / dustypcs only displaying computers when they were dirty, but rarely did people post pictures after it was cleaned, which made many people feel unsatisfied.

Many photos are posted by IT industry experts or members of tech-savvy family, who often complain that the computer is " *running hot* ", " *running too loud* " and " *can be suspended at any time* ".

Photo source: Reddit

In fact, fans and radiators that are clogged with dust will cause the computer to heat up and heat " *hate* " electrical devices. This makes your computer run slower and slower to not produce much heat.

This is a dust-covered dust, which holes are there to dissipate heat?

The fan of this computer cannot directly push its hot air through the upper air vents because there is too much dust there and you cannot see the vents above.

This means that hot air cannot escape your computer, which causes it to become hotter, run slower even after running at full capacity.

According to the poster, the laptop was brought to repair for " *some unrelated reasons* ". One strange thing is that the computer can work normally after blowing out the dust.

So many people still wonder why not play the game but the laptop is still as hot as the coal.

The radiator fan of this Mac is equally dirty. This is a Mac Mini that has suffered the same fate as the computers on this list.

The Apple Mac computer, the exterior is beautiful, but the inside is surprising, isn't it?

Besides, there are lots of images uploaded that show the consequences of smoking when using a computer and that is a bad image right?

The notable brown wax dust should not be there!

And more nightmares are computers used in industrial plants or warehouses. It looks like a computer in this photo, it is used in tea factory. According to Redditor, who posted the image, the computer was last cleaned in 2010.

And this is a picture of a computer used in a warehouse.

Even the computers in the pastry factory are not safe when filled with baking powder in the air.

On the Internet never limits " *super dirty* " computers, there are some pictures of the PlayStation 3.

Or Xbox 360, don't say too much when listing it on this list?

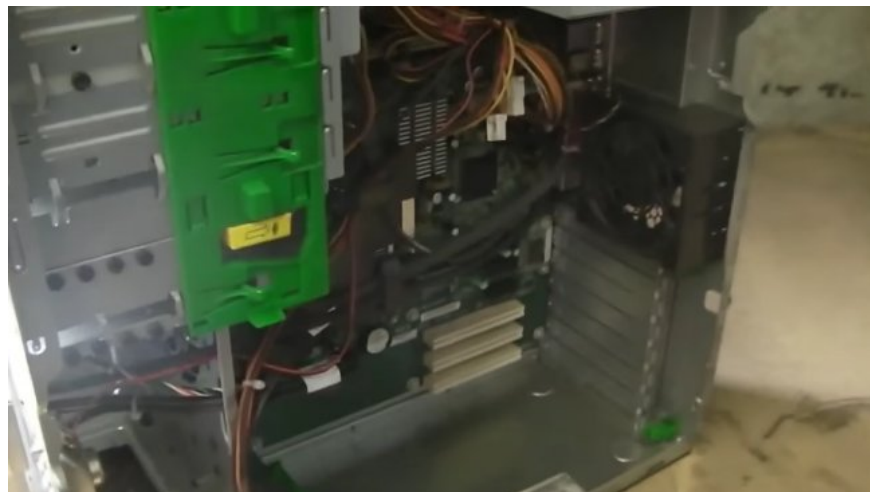

Some people also have to use compressed air boxes to clean dust from their computers. Besides, others also use more creative and effective ways to clean dust and garbage inside the computer with a leaf blower for cleaning.
