

# See the Apple Park campus about to be completed in the latest panoramic video

The latest video filmed by Matthew Roberts' drone shows that the work at Apple Park is about to be completed.

The latest video filmed by Matthew Roberts' drone shows that the work at Apple Park is about to be completed.

The final stages are being deployed with buildings and surrounding outdoor areas. The video shows the center for visitors to Visitor's Center located along the road from the completed ring-shaped building itself.

The Visitor's Center uses carbon fiber roofs and materials similar to the main building opened last Friday. It has an inner area like Apple Park, from the roof to view the entire campus, there is a coffee shop with tea, snacks and Apple Store selling Apple products and some exclusive items of Apple Park like T-shirts, hats, bags, cards.

The landscape is still continuing with the grass beds outside the 2-layer glass door of the cafe, the lake at the center of the campus has been poured.

The outside food was almost finished, the solar panels on the roof of the ring-shaped building were being installed. Apple Park will run entirely on renewable energy provided by these panels.

Many campuses are completed but there are still unfinished items, such as the area near the fitness center. Even so, the staff has gradually moved to Apple Park. At this rate, construction will probably be completed in early 2018.
