

See the 'monster' Hewlett Packard J2300, what are the 90s laptops and what can be done that cost up to \$ 20,000

As a laptop-oriented device, Hewlett Packard J2300 has a mouse device attached to the device, called pop-up mouse. The mouse can work even if you don't put it on a flat surface.

The computer J2300, designed in the 1990s by Hewlett Packard, the world's largest IT group, is dedicated to technical experts, so its functions and prices (each time comes up 20,000 USD) not for ordinary users.

1. Looking back on 60 years of miraculous development of hard drives today
2. Experience in buying new laptops for students

Check out the video below to know why Hewlett Packard J2300 has such a "sky price".

As a laptop-oriented device, Hewlett Packard J2300 has a mouse device attached to the device, called pop-up mouse. The mouse can work even if you don't put it on a flat surface.

When it started, it let out a growl that sounded like a pump, you could even hear the floppy drive running.

As technology develops, the computer market changes, this "laptop" becomes "backward" and doesn't help much when running Windows 95, 16 MB RAM, 100 MHz Intel 486 DX4 CPU and drive. Hard to have 1.6 GB. It was quickly "shelved".
