

Selfie AI Beauty Technology - The climax of selfie

What is Selfie AI Beauty technology and how does it work in selfie?

Referring to Selfie AI Beauty technology, maybe in Vietnam many people are still quite strange because it has not been widely applied. But in the world, this technology has appeared for a long time and has been used by a number of well-known technology companies such as Microsoft or Google in researching the creation of artificial intelligence in cameras, while researching creativity and letting meet the increasing demand of users. Each company will have a way to manipulate the artificial intelligence on the camera in its own way, but the general purpose is to make the phone smarter and enhance the camera experience for users. So what is this technology and how does it work, let's find out.

1. What is AI Beauty technology?

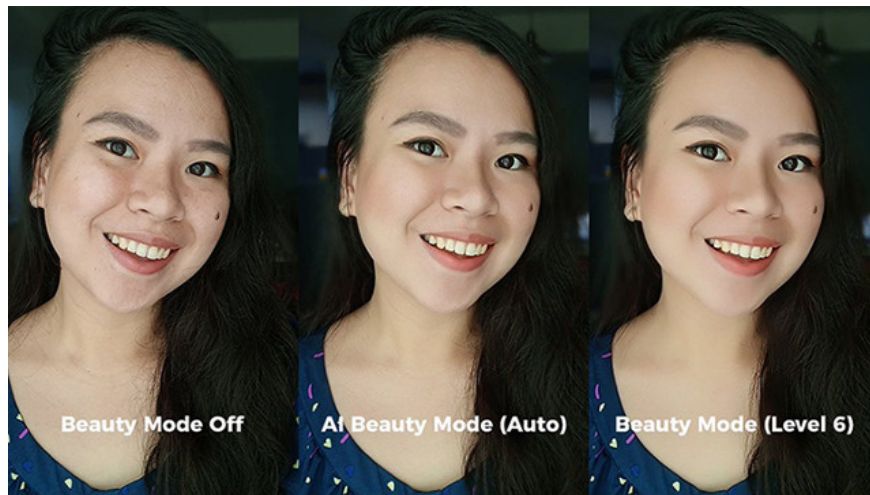

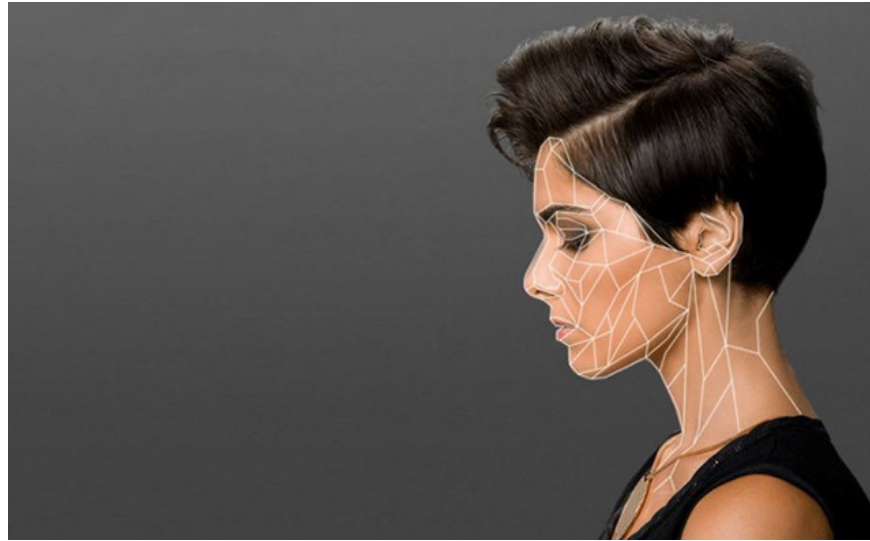

AI stands for "Artificial Intelligence", meaning artificial intelligence. Therefore, it is understandable that AI Beauty is a combination of artificial intelligence with selfie camera for beauty. Recently, this technology is closer to many thanks to the Oppo F5 product line, which has used this artificial intelligence on camera selfie, according to the increasing and demanding selfie demand of users. Good quality today, helping the camera identify more than 200 different points on each person's face, including: Skin type, skin tone, age, gender, . From there, use the database Data, create selfie photos that have been calibrated with details (eyes, nose, mouth, chin, skin, .) are very natural and attractive.

2. The difference AI Beauty brings

Without stopping, AI Beauty can actively learn and cultivate its own knowledge. The more you contact the camera, the more it will understand your face, and gradually bring out the most natural and appropriate beauty solutions for you. That is a good point, although it makes changes, corrections but still retains the image of your face, not so magic that it looks like another person.

As many other selfie cameras cannot distinguish between men and women. Therefore, when shooting, the image gives the same pattern: the v-line, the pointed chin, the big eyes, the smooth skin, and not being too natural and illusory. For AI Beauty, it will create a pink and white skin, smooth the skin or adjust the contours of a slim, delicate face for women. As for male friends, AI Beauty on the camera will still create strong features of a man's face such as adjusting the skin tone to match, masculine, this is a very attractive point compared to the current smartphone models. in.
