

Send, receive encrypted messages, self-destruct messages, secure chat with KeeperChat

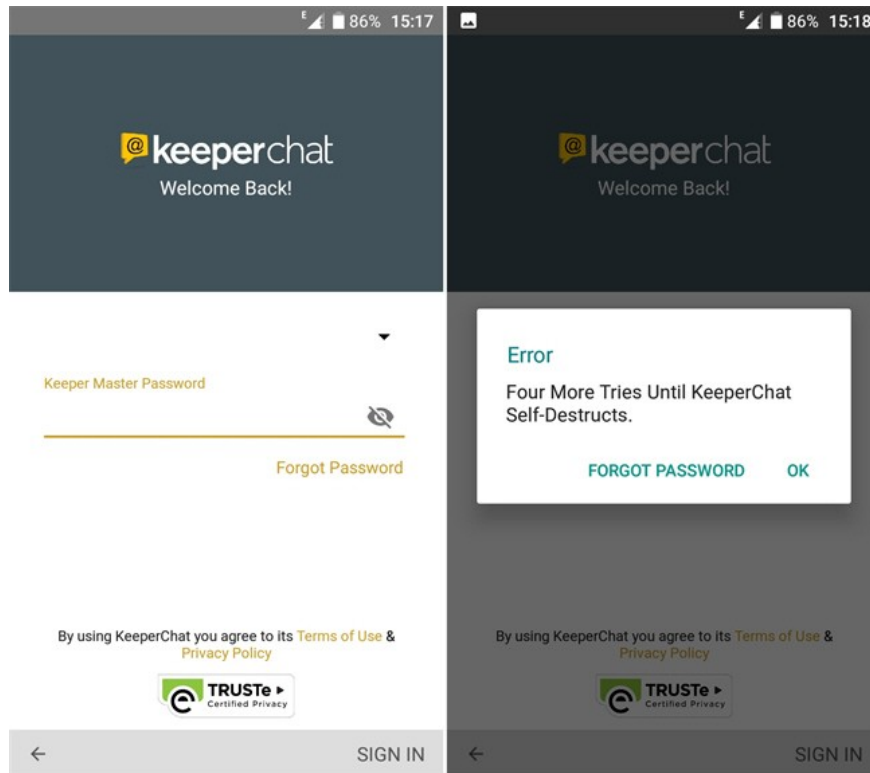

Keeper Security, manufacturer Keeper Password Manager, has just released a new application called KeeperChat for iPhone and Android phones. This is a secure messaging application that allows users to communicate via an internet connection with a high security code.

Keeper Security, manufacturer Keeper Password Manager, has just released a new application called KeeperChat for iPhone and Android phones. This is a secure messaging application that allows users to communicate via an internet connection with a high security code. In addition to securely sending and receiving text messages, the application also provides each user with 1GB of cloud storage. Users can securely store messages, images or other multimedia files in this repository.

2. How to backup and restore Zalo messages on Android phones

If you already have an account for Keeper Password Manager, you do not need to create a new account, and use the same Keeper account for KeeperChat. But if you do not have a Keeper Security account, you can register a new account with just an email address and a secure password. Make sure you don't forget this password, because if you enter the wrong password a few times, KeeperChat will start the self-destruct process. Once there, you will have to start over from the beginning and install KeeperChat again.

KeeperChat only works when both contacts are installed KeeperChat on their device. Messages encoded with 256-bit AES algorithms cannot be broken even by the most powerful computers. The message will be decrypted on the device, not through the intermediate network, so your message will be extremely secure from network attacks. In addition, you can also compose messages that cancel themselves when the recipient reads them.

Unlike regular text messages, which cannot be retrieved when you have pressed the submit button, you can retract your message at any time in KeeperChat. With the free version of KeeperChat, you get 1GB of cloud storage, but you can also sign up and pay for unlimited applications.

You can download KeeperChat from <https://keeperchat.com/download.html>
