

Share WiFi passwords between iPhone and Android using Visual Codes

Sharing WiFi passwords between two iOS devices is extremely simple, but what if you want to share passwords from iPhone to Android?

If you want to share WiFi passwords between two iOS devices, it's extremely simple, but if you want to share passwords from iPhone to Android, what to do? Please read the following article of TipsMake.com to find the answer.

How to share WiFi from iPhone to Android

Step 1: Connect the WiFi you want to share. You need to know the necessary information such as network name (SSID), security type (WPA, WEP .) and WiFi password. This information is usually on the router.

Step 2: Use Visual Codes to create a QR code. Download the application, launch it and click Add codes.

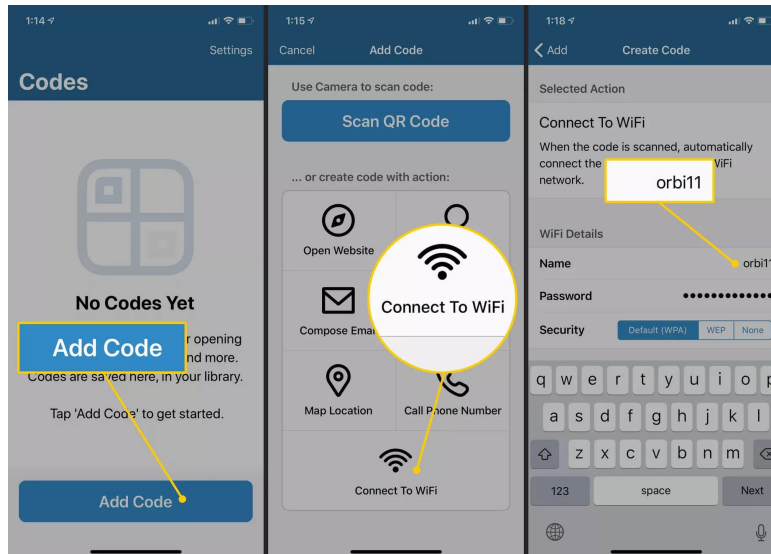

1. Download Visual Codes here.

Using Visual Codes create a QR code to share WiFi

Step 3: At the bottom of the user interface, click **Connect to WiFi**.

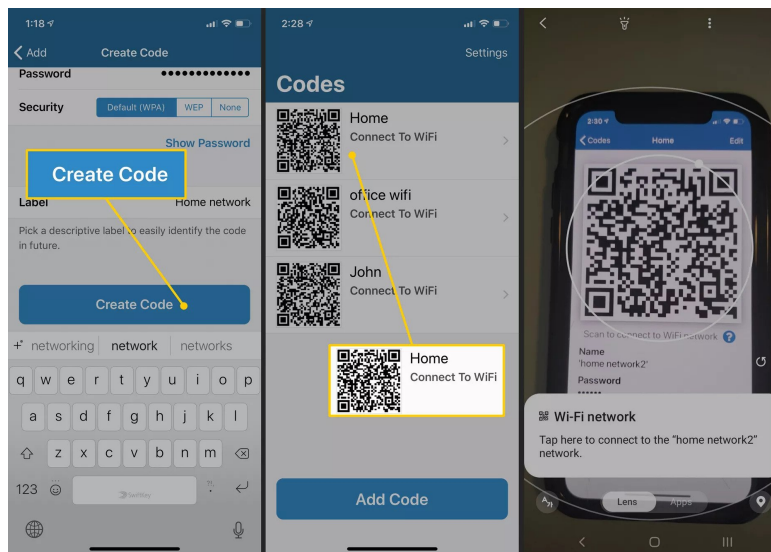

Step 4: Enter the WiFi password and click the correct security type, usually WPA. Next, enter a memorable name for the WiFi, then select **Create Code** to generate the code.

Generate QR codes to share WiFi passwords

The newly created QR will appear in your code list, click to display the full code.

Step 5: Go to Android phone, scan the code to scan the code. The device will automatically receive the code to connect to WiFi without a password.

Go to Android phone, scan the code to scan the code.

Step 6: When the notification turns on the Wi-Fi network appears, tap to automatically connect to the network.
