If you are using a Mac and do not know that you can use a Mac as a wireless access point to share the internet connection for other wireless Ethernet devices such as mobile phones and laptops . The following article will help you do it very easily and quickly, with only 4 steps:

Step 1: Click on the Apple icon and select **System Preferences**

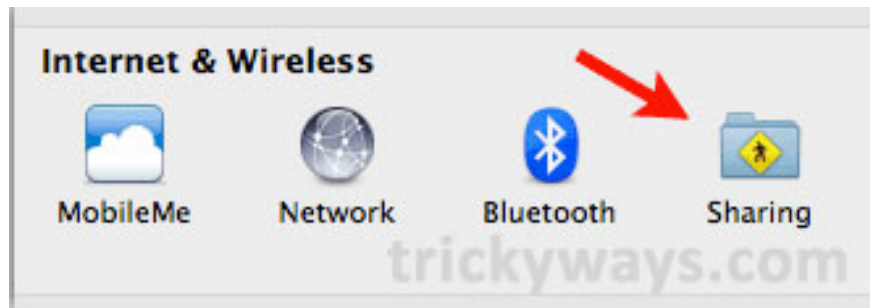

Step 2: On the **Internet & Wireless** interface click on the **Network** icon.

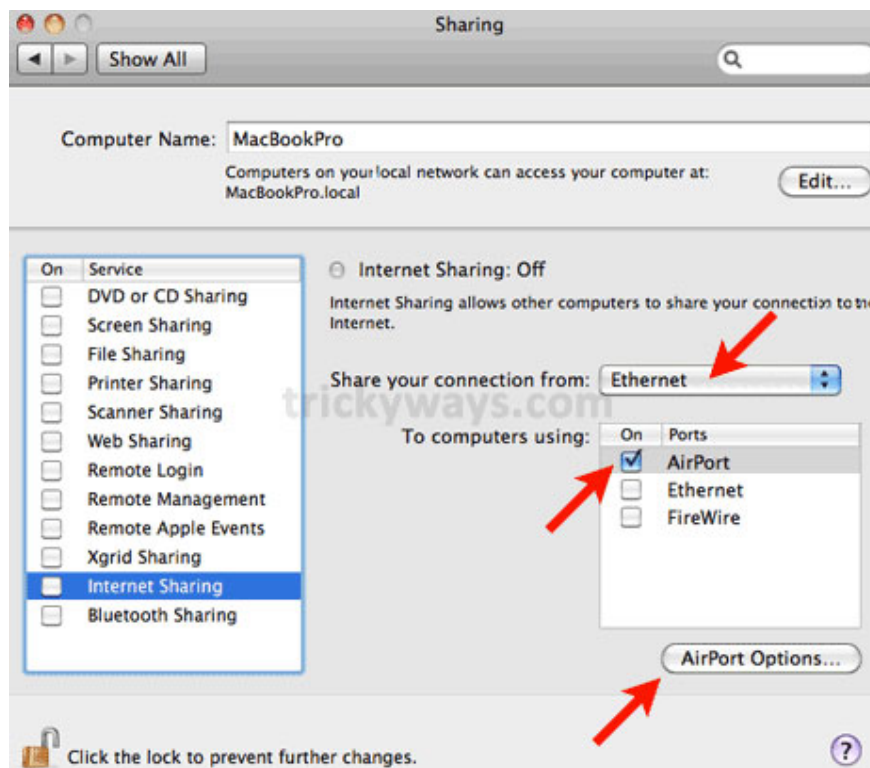

Check **Ethernet** and Internet connections are working on your Mac by opening any web page in the browser.

Step 3: Now go back to the **Internet & Wireless** interface and click the **Sharing** icon to allow Internet sharing on the Mac.

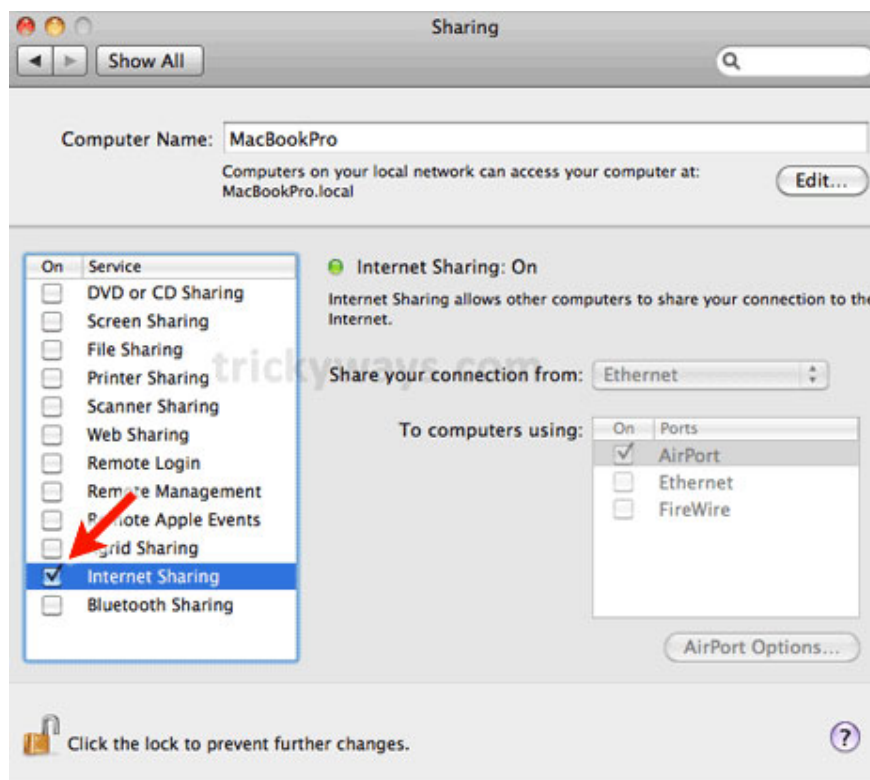

Step 4 (Set up Internet Sharing on the Mac): Click on the **Internet Sharing** option in the **Service** pane on the left, Select **Ethernet** from the drop-down menu of the **Sharing your connection from the AirPort** section of the **Tocomputers** section. **dùng** . Next click **AirPort Options** .

In the next window you set up a connection name in **Network Name** and password security if you want at **Password** section then confirm the password in **Confirm Password** then click **Ok**

Now check the box before **Internet Sharing** on the **Service** pane to start sharing your Mac's internet connection.

Here you select **Turn On AirPort** and select the **Start** button to start sharing the internet.

To share your Internet connection, you must turn on AirPort.

AirPort is turned off.

Cancel

Turn AirPort On

Are you sure you want to turn on Internet sharing?

If your computer is connected to a network, turning on Internet sharing may affect the network settings of other computers and disrupt the network. Contact your system administrator before turning on Internet sharing.

Start

Cancel

So if you have successfully connected, all your access will be wirelessly connected using **Mac AirPort** .

* **Note:** If using **Mac OS X Snow Leopard** you can share the internet with iPhone, iPod Touch, iPad, xbox 360, PS3, PSP, PC, Windows, Mac, Mobile phones and all devices Other WiFi connectivity.
