

Sharp introduced its 8-inch 8K TV that turns your 4K TV into obsolete

If you are using 4K TV and think you already own the worst resolution TV, then slowly, technology is going at a dizzying speed than you think.

If you are using 4K TV and think you already own the worst resolution TV, then slowly, technology is going at a dizzying speed than you think.

As the TV becomes cheaper and technology has improved, you may have been persuaded to pick up the sharp 4K TV displayed in the living room. Compared to old TV, it is true that the TV you own is very grand. You have the right to be proud of your friends and relatives but to Sharp. The company thinks 4K is obsolete and you will also have to think when looking at their new product.

The 70-inch Sharp Aquos 8K TV delivers a resolution of 7,680 x 4,320 pixels, 16 times larger than the usual Full HD standard . Now that is all we know about this TV because Sharp has not yet released the details.

Sharp also actively supports its 8K TVs as it develops the 8K broadcast receivers, 8K cameras and other 8K products, to develop an ecosystem of content compatible with 8K standards. What value will TV 8K have if we don't have the corresponding 8K content?

Sharp's first 8K resolution TV in the world

That is also the problem that 4K standard is currently encountered. Currently, 4K content has been more than a few years ago but it is still not popular.

As the resolution gets higher and higher, we will eventually get to the point of decreasing marginal benefits. The more you sit away from the TV, the harder it will be to recognize the difference between pixel levels. The difference between 4K and 8K TVs can be almost unrecognizable. But if you use a TV as a computer screen, the story turns to another.

Sharp said the TV will be sold in China in October, Japan in December, Taiwan in February next year and in Europe one month later. There is no official information on the price, but a source said that at least it must cost \$ 9,000.
