

Should a ceramic heating fan be used for children?

Ceramic heating fans are trusted by mothers for babies and young children because of their high safety and non-glowing properties, so they do not cause eye damage, do not cause breathing difficulties, and do not dry the skin.

For families with young children, it is essential to equip heating equipment. Instead of using 2-way air conditioning, the cost would be more expensive to install, so the mothers chose to buy ceramic heating fans. Let's look more closely at the ceramic heating fan which has outstanding features that mothers believe to use.

Why are ceramic fan heaters favored by mothers with small children?

Compared to the type of halogen heating fans, infrared electric heaters, the ceramic heating fans are more expensive but still be bought more by mothers because of the following features:

Principle of operation of ceramic heaters (ceramic)

Ceramic heating fan is the most modern heating device on the market. Ceramic heating fan is equipped with a ceramic disc. When plugging in, using the fan will suck cold air from the back of the fan and heat the ceramic rod inside then bring the heat radiating from the outside to the outside to increase the room temperature without causing thermal shock. When operating non-aching machines for rheumatism, it is suitable for all users from children to the elderly.

High mobility, no installation required, no space required

The ceramic fan is designed to look like an extremely neat vertical cylindrical tower fan. The weight usually ranges from over 2kg - less than 5kg so it is easy to set up an area that is easy to move to the desired location. Therefore not only for families but also for offices, hospitals or clinics.

Beautiful ceramic heating design with modern colors, made from heat-resistant plastic is very durable.

Using ceramic heating fans saves 50% of electricity costs

Ceramic heating fans allow low and high power adjustment, 3 wind modes to choose from: cool wind, warm wind and hot wind help save energy efficiently. The off timer also contributes to significantly reducing your family's power.

Multi-function ceramic heating fan

Ceramic fan integrates up to 3 functions: hygroscopic when weathering, cooling fan for summer, warming in winter so it can be used all year round.

Health protection for users

Genuine ceramic fan heaters are made of flexible PVC or ABS plastic, so it is safe for health. When using do not emit unpleasant odor. Plastic material is not deformed. The inner ceramic disc is protected by an ultra-durable outer metal mesh, good impact resistance.

Use extremely safe ceramic fan

This is the factor that users are most interested in because it directly affects human health. Ceramic heating fans are equipped with a self-tapping feature when tilting or pouring helps limit unwanted hazards.

When overloaded the fan will automatically turn off to prevent fire.

Do not dry the skin, do not cause breathing difficulties

For babies and young children, the skin is usually thin and more sensitive so the mothers choose the ceramic heating fan is very accurate. Ceramic fan will not dry the skin, do not burn oxygen, so it is not difficult to breathe when using in a closed room. Also when using a non-glowing fan, it does not affect the baby's eyes.

Ceramic heating fans have many other modern features

1. Heating fans with remote control make it easy to adjust functions.
2. Most ceramic heaters are equipped with a screen to display the temperature and other functions that are convenient for monitoring.
3. There is an off timer function, reversing the wind direction

These are 8 extremely convincing reasons why the ceramic fan is used by mothers. If you are planning to buy heating equipment for your home, ceramic fan is the best option for you.

3 samples of the best ceramic heating fan for families with young children

1. Ceramic heating fan for FujiE floor CH-2200 - Reference price: 1,620,000 VND
