The use of face washers

Facial washers are a **facial** care tool used by many women. This device can give you a smooth, bright white skin thanks to great uses such as:

1. **Facial cleansing** : a face wash device can remove dirt, dullness from deep within the pores - something that traditional facial cleansing is difficult to do.
2. **Exfoliating** : In addition to the ability to clean the skin, the face wash machine also helps to remove dead skin cells on the skin surface, returning you smooth skin, bright white.
3. **Enhance blood circulation under the skin:** The vibrating, rotating movements of the facial cleanser are similar to the massage movements, help the skin relax, support blood circulation and stimulate toxin elimination.

Facial cleanser helps clean skin from deep pores

Should acne skin use a face wash machine? What should be noted?

Acne skin is very sensitive skin. Just washing your face the wrong way or using the wrong care product is enough to make acne worse. People with acne can still use **a face-washing machine** to increase the effectiveness of skin cleansing, but must note some of the following:

1. Should choose a face wash tool with a soft brush, moderate vibration to avoid damaging the skin
2. Only use facial cleanser every 1-2 weeks. If you see any abnormal signs, you should stop using them immediately and consult a doctor
3. Regularly clean the brush tip to prevent bacteria from forming
4. Do not share washing machines with others
5. Suitable skin care products should be used to increase the effectiveness of acne treatment

Acne skin should use a face wash machine with a reasonable frequency and level

Some types of face washers for acne skin
