

Should a fan of winter or 2-way air conditioning be used in winter?

Many people will feel anxious in choosing between 2-way air conditioning and fan heating when the weather becomes cold. Between these two products, which one is better and more economical? Find answers through this article of Quantrimang!

Many people will feel anxious in choosing between 2-way air conditioning and fan heating when the weather becomes cold. Between these two products, which one is better and more economical? Find answers through this article of Quantrimang!

I. Comparison criteria between 2-way air conditioner and heating fan

About the price

Of course, 2-way air conditioning will have a much higher price than heating fans. A basic 2-way air conditioner with a price below 7 million VND, a high-end model with a unit will amount to several tens of millions. Meanwhile, with only a few hundred thousand dong, you can own a heating fan to overcome the cold winter days.

About power consumption

Regarding power consumption, these two devices also have a big difference. However, the advantages belong to 2-way air-conditioners. A fan has a lower price, but it consumes much more power than air conditioner.

About functions used

When using 2-way air conditioner, you will be able to use it to cool and warm. In the summer, it will bring a cool breeze to dispel the heat, and winter will become an essential heating device. Generally this 2-way air conditioner is usable all year round.

In the meantime, you can only use a fan in the winter.

2-way air-conditioning will also provide a warming capability in a wider area, while a heating fan usually only warms a certain area.

In return, the heating fan gives the ability to warm up much faster than 2-way air conditioner. It takes only 5 to 10 minutes to see the space warming up a lot.

Another important thing is that heating fans often dry the skin more than air conditioning, especially in winter when the climate is already dry. That is why many people often leave a wet towel in the room with a fan to create humidity for the room.

However, no matter which of the two devices you choose to use, we recommend you to install an attached humidifier. In some high-end air conditioners, the humidity function is also integrated, if you choose to buy this type, you do not need to buy more.

Compare advantages and disadvantages of 2 types:

2-way air conditioner Heating fan

- High price (from 7 to over 20 million VND depending on type & capacity).
- Slow warming.
- Range of air conditioner on wide area.
- Less electricity.
- Should invest if turned on continuously.
- Convenient for both winter and summer.
- Limit the problem of drying user skin more.
- Cheap price (from a few hundred thousand to about 4 million).
- Warm up fast.
- Only warm a small area.
- Power consumption.
- Reasonable if only used for a short time.
- Only available for winter.
- May dry skin.

II. Should a 2-way air conditioner or a heating fan be suitable?

When should I choose a 2-way conditioner?

1. If your family has conditions and wishes to have a device that can be used all year round.
2. Demand for regular heating.

When should I choose a heating fan?

1. If the house is having a baby, and just need to quickly warm up when the baby goes to bath, toilet .
2. If your home has one-way air conditioning and there is no need for high heating
3. Initial costs are limited, do not want to invest products with high prices like air conditioners

III. Some of the most popular heating fans today

1. Ceramic heating fan FujiE CH-1600RM - Reference price: VND 1,250,000
2. Halogen electric heating Hichiko HC-1207A - Reference price: 849,000vnd
3. Ceramic ceramic fan Mini FujiE CH-202 - Reference price: VND 439,000
4. Ceramic FujiE CH-1600 heating fan - Reference price: VND 1,080,000

Combined with our sharing, and based on actual needs at home, you will definitely get the most suitable option to overcome the harsh weather days of the winter.
