

Should a hair dryer be used for babies?

Hair dryers create a stream of heat to dry hair quickly. However, should a hair dryer be used for babies? The following article will help you answer.

Hair dryer is an indispensable beauty item for women. In particular, on cold days, drying your hair will help protect your health. However, for children and babies, should a hair dryer be used? We will help moms learn more!

Principle of operation of hair dryer

The dryer dries up by increasing the temperature causing the water to evaporate faster. Hot air from the hair dryer increases the air temperature around the hair fibers. Because hot air flow can contain more moisture than air at room temperature, water can move from your hair into the air. High temperature will help water molecules

to overcome the attraction of other molecules and move from liquid to vapor.

Should a hair dryer be used for babies?

Hair dryers of the series have high heat radiation. A conventional hair dryer has a large capacity, falling into 1000W - 2000W with the radiation level in a moment of nearly 1700V / m. Moreover, the greater the power, the stronger the radiation.

For adults, using a hair dryer regularly at a high speed will make it easier to dry hair, dry hair or damage hair. If using a dryer for a long time, it can affect health due to electromagnetic radiation. Many women wonder if they should use a hair dryer for babies, especially for young children and babies.

In fact, there were many cases where the baby burned when the mother dried her hair with a hair dryer without being careful. Because your baby's skin and hair are still very thin and sensitive, even if you turn on the device at low speed or choose a device with a small capacity, it is dangerous to use a hair dryer for young children. Therefore, after bathing the baby, the mother should use a soft cotton towel to gently wipe the baby.

Note when using a safe and effective hair dryer

1. Dry wet hair before drying to avoid sudden temperature changes, causing hair damage
2. Drying at low temperatures of about 57 degrees Celsius, avoid damaging hair
3. Continually move the dryer when drying your hair
4. Should choose the type of dryer with cooling function
5. Use styling dryer

6. Use the correct voltage and follow the instruction manual
7. Do not place hair dryers running on flammable objects such as paper, notebooks, newspapers, cloths .
8. When the condition of the dryer automatically disconnects when it is too hot, turn it off, unplug it and let it cool for about 20 minutes.
9. When drying, let the dryer head about 7 - 15cm
