## What is decorative ceiling fan?

Ceiling fan lights are products that combine ceiling fans and decorative chandeliers. In addition to cooling capacity, these fans are also seen as decorative objects that bring unique and luxurious beauty to the room. Currently, ceiling fan lights are very rich in designs and designs to help consumers have more choices.

## Evaluation of advantages and disadvantages of ceiling fans with lights

### Advantages

**Unique design:** With a sophisticated and modern design, these fans can express the host's level and "playability". Owning a ceiling fan decorated with lights will make anyone who stepped into the room admire and enjoy.

**Power saving:** Most ceiling fan lights use LED energy-saving lamps. This type of lamp has a very good lighting capacity with a large lighting capacity even the gas used for large spaces. In particular, LED bulbs are also flexibly adjusted to 3 lighting levels:

1. White light
2. White light during the day
3. Golden light to meet flexibility for all living needs.

**Multi-function:** Besides the 2 main functions of cooling and lighting, the ceiling fans with this lamp are also equipped with other functions such as: Variety of wind speed, convenient and economical timer mode Power and operation with high performance.

**Save space:** In the same place, instead of installing 2 devices, now with just 1 ceiling fan you have 2 purposes. From that space, the room is the most economical, contributing to the space more airy and more harmonious.

**Good quality:** Fans are produced on a very modern technology line, the technical processes are best guaranteed so consumers can be assured of choosing and using without worrying to replace or repair cure.

### Defect

The biggest disadvantage to mention here is the price. Since most ceiling fan models are imported, it has a much higher price than regular ceiling fans. On average, a fan of this line also has a price of 2-3 million dong.

## Are ceiling fans cool?

Many people seem quite "afraid" of their cooling ability. They often think, when operating, the heat generated from the chandelier will affect the quality and cooling of the fan. Moreover, when the fan is rotating, the top beam will also have more or less impact to bring insecure feeling to users.

However, the current ceiling fan models have all overcome these disadvantages. LEDs used in place of filament lamps help to generate less heat, the lights are arranged more scientifically, the rotor is calculated to ensure cooling speed without affecting the lighting system.

Along with that, the fan's operating capacity is usually in the range of 75W or more, so they have an impressive cooling capacity and are not inferior to any fan.

By now, can you be assured of their cooling ability?
