3. It is not difficult to remove unpleasant odors in the washing machine

However, in the process of using, there is a problem that makes a lot of women wonder that when clothes are sticky with dirt, dust . very dirty, they should be put into the washing machine, or have to discharge dirty first. then wash the machine? To solve this problem, invite your sister to refer to the following article of Network Administration.

## 1. How does the washing machine work?

A washing machine is a machine that is designed and operated according to a fixed cycle that is used to fill, soak, wash, rinse and squeeze. Currently, many modern washing machines are integrated with drying features.

In essence, the washing machine is designed based on simulating the rotation of clothes continuously in the bleach mixture. At this time, the clothing surface is frictioned together, mimicking the action of rubbing clothes when washing hands, helping the stains to be removed from the fabric. In compliance with this principle, the vertical cage washing machine is designed by a manufacturer with a rotating disc at the bottom of the washing cage, which is used to reverse the clothes. But because clothes are an unformed block, the rotation in the washing process of this model is often imperfect and irregular. And the horizontal washing cage design helps to increase the friction between clothes and the washing cage surface during use. The force of reversing clothes is also stronger, more even. So, just like when you scrub your clothes more closely than washing your hands, clothes washed from this machine are also cleaner.

## **2. So very dirty clothes should be put into the washing machine?**

With a small amount of dirt and dirt on clothes, it is very little to stay and damage the washing machine. However, with conventional washing machines today most of them are not able to sense the dirt of the water to automatically wash until the clothes are really clean and only operate according to a fixed cycle.

This means that if your clothes are too dirty, the washing machine will not be able to clean them once. At this point, you will take time to wash it again to make sure the clothes are completely cleaned.

If your work is frequently exposed to dirt, you can wash your hands before putting it in the machine. But if you need time to take a break and don't want to wash your hands, you can also put dirty clothes in the washing machine and wash again to ensure clean clothes.

However, when washing clothes in the washing machine you should classify dirty clothes as well as light-colored clothes, shirts, school supplies to avoid getting dirty and fading.

## **3. How to handle stains before putting them in the washing machine**

Normally, dirt consists of three basic types:

1. **Mud and dirt** : With this kind of dirt, if you stick it on little clothes, you can put it into the washing machine right away. If the stain is too much and it has been hardened, you should treat it with water and a specialized brush to reduce the amount of mud.
2. **Cement mortar, gravel and sand** : If your job is in cement and lake sites, then your clothes will be hard to avoid. To handle these stains, you should hang up your clothes to dry them and then rinse them well so that the mortar and sand and gravel fall off before you put them in the washing machine.
3. **Stubborn dirt such as coffee, grease** .: With these stains it is not easy you can clean immediately. For thorough treatment you need to use specialized detergents or bleaches to clean them before you put them into the washing machine.

Above are some tips for you when using the washing machine. In addition, when choosing to buy a washing machine, you can choose a front-loading washing machine because it has the ability to fly stains faster than the upper washing machine.

Hopefully the experience that we have just shared is helpful, to make life more comfortable.
