

Should I buy RO water purifier or Nano water purifier?

Which RO water purifier and Nano water purifier is better, which water filter should I use? TipsMake.com will analyze details of pros and cons of RO or Nano water purifier for you to understand better.

RO water purifier and Nano water purifier are the two best water purifiers on the market. Each type of water purifier has its advantages and disadvantages. Today TipsMake.com will do a review of these 2 water purifiers so that everyone can make a reasonable purchase option.

Advantages of Nano water purifier, RO water purifier

RO water purifier Nano water purifier

- Water after filtering can drink without boiling, very convenient.
- Often equipped with a core of beneficial mineral compensation, bactericidal, pH balance, creating a sweet taste for water to help the water source be both delicious and clean.
- Electric water purifier, with waste water, will cost electricity and water.
- RO filter membrane has the ability to self-wash when the water filter so the life is longer.
- Low cost of replacing filters.
- Machine with water pressure reserve. Machine with water pump is suitable for low water pressure.
- Water after filtering can drink without boiling, very convenient.
- The filtered water retains many natural minerals that are very good for the elderly and young children. However, this model does not have a pH balance function, does not kill bacteria.
- The machine does not need to use electricity, has no waste water, so it does not consume electricity and saves costs.
- The machine does not have a self-cleaning function so it must replace the filter core quickly.
- Because there is no waste water, the time for replacing filter cartridge is higher.
- Machine does not use pressure vessel so extremely compact, makes it easy to install in any position in the family.

Disadvantages of Nano water purifier, RO water purifier

RO water purifier Nano water purifier

- RO water purifier when filtering water will not keep natural minerals good for the body from water sources but users must buy more mineral-forming filters.
- The amount of pure water collected is less than the amount of wastewater discharged. For example, 10 liters of raw water will filter 3-5 liters of pure water. However, the waste water you can still reuse to wash vegetables or bathe, wash your face .
- Using electricity, if the power is out, the water purification process cannot be performed.
- The price is more expensive.
- The designed Nano water filter has no pump so it is not suitable for places with weak water sources.
- There is no pressure tank to store pure water, so if used regularly, it will not meet the demand.
- Because there is no wastewater, the core replacement time is faster, the core replacement cost is higher than the RO water purifier.
- Do not filter many water sources such as alum, brackish water . because it is easy to clog the filter core.
- The price is cheaper.

Which water sources does the Nano water purifier, RO water purifier filter?

RO water purifiers will filter all water sources. However, with water contaminated with alum, acid needs to be filtered by the user before water is supplied to the machine.

Nano water purifier is only suitable for tap water filtration. Do not filter alum water, river water, brackish water, well water . With salty water, the machine will not filter the salty taste in the water.

So use RO or Nano water purifier?

After going into the analysis of the advantages and disadvantages of RO or Nano water purifiers, depending on the cost, the installation space and the input water is tap water or well water . that you You can choose one of these two types of water purifiers.

However, you should choose to buy water filters from reputable companies to bring high water filtration efficiency. Buyers can refer to a number of well-known water purifier brands such as Karofi water purifier, Sunhouse water purifier, Kangaroo water purifier, Pureit water purifier . This is one of 4 reputable and well-known brands. extremely good warranty, periodic maintenance, worthy of choice.
