What is a misting fan?

The misting fan is a fan that operates based on the evaporation principle of the water. When you turn on the fan, the fan will pump clean water from the water tank to the top of the fan, compressing the water at high pressure through solid nozzles. Specially designed inside the fan.

Then transform the water into a mist sprayed out, the tiny mist quickly spreads in the air, evaporating in a matter of seconds, helping to moisten the hot, dry air.

Normally the temperature will drop to 3 to 5 degrees C after a short time when the fan is turned on.

Should I use a misting fan?

Advantages misting fan

1. **High cooling capacity:** Normally the temperature will drop to 3 to 5°C after a short time when the fan turns on.
2. **Power saving :** enough capacity for the misting fan to operate at ¼ of the capacity of air-conditioner, so the misting fan saves the maximum household power.
3. **Low cost:** the cost of a misting fan is much lower than the cost of buying, installing and maintaining an air conditioner. So many people choose to buy misting fans rather than air conditioners when in need.
4. **Effective moisture balance:** thanks to the mist spray function, the fan helps balance the humidity in your home space, increasing the moisture of your skin, not causing respiratory diseases. If your home uses air conditioning, combine it with a misting fan because the fan can overcome the dehumidification of the air conditioner very well.
5. **Mosquito and insect killing mode:** New generation misting fans are equipped with mosquito repellent mode, insects help your family sleep better. If your home has a small child, when you use this fan, you will not have to worry that the baby will have stings on the limbs, the baby will sleep through the night in the cool, comfortable atmosphere created by the misting fan.

1. **Create ionic moisture to clean, cool the air:** some fans have the function of creating moisture ion, when operating this function, the fan will create a fresh and cool air, helping your family to be healthier and

happier. .

2. **Easy to navigate, convenient controls:** The fan is compact, not fussy, you can easily move the fan to whatever position you want. Every operation of the misting fan is controlled via a remote, you just sit in one place and adjust the fan as you like.
3. Some types have the function of dispersing aromatic oils to make the room always fragrant and cool.

Disadvantages of misting fans

Cooling is not as fast as air-conditioner: the cooling ability of a slow-mist fan is not as fast as an air conditioner, so when you turn on the fan, you won't feel cool immediately. This is good for your health, because when the temperature changes too suddenly from hot to cold, it makes your body unbalanced, not good for the respiratory system.

The scope of diffusion is limited: due to the characteristics of the design, the misting fan has a wide spread range, the operating angle is only 180 degrees C, so it is somewhat more limited than air conditioner, but the fan can compensate. Move easily so when you want the space to be cool, move there.

Should I buy misting fans?

With these advantages, the misting fan is definitely suitable for small rooms and saving electricity. So please shop for yourself this "universal" fan to save the hot summer.

What kind of misting fan is good?

1. Kangaroo KG552 misting fan (with remote control) - META price: VND 1,190,000

The misting fan has a common cooling function and a separate mist spray function, depending on the weather temperature, you can choose the desired cooling mode.
