Learn about nebulizers

What is a nebulizer?

Nebulizers are devices that use ultrasound to separate water into tiny particles, which are then released into the environment in the form of a thin mist. The current mist spraying devices are quite diverse with many different styles, from delicate and modern to super lovely 'like mist sprayers, animal-shaped nebulizers (frogs mist spraying, mist sprayers, spray pigs) dew),...

Uses of nebulizers

Should I use a nebulizer? In fact, this device is worth choosing and using for the following great benefits:

1. Supply and balance the humidity for air
2. Increasing the efficiency of diffusing essential oils into the air, thereby helping essential oils to maximize their use as deodorizing odor, repelling insects, creating a pleasant fragrance for the room, .
3. Some nebulizer lines also have the function of filtering dust, disinfection, mold, . bringing fresh air, ensuring health safety for users.

Should I use a nebulizer in an air-conditioned room?

Air conditioner is an extremely fast and efficient cooling device. However, besides the outstanding advantages, air conditioning also has certain limitations. When operating, the air conditioner absorbs the air, causing the air to lose moisture balance. People who regularly sit in the air-conditioned room are more likely to lose water, dry their skin and are at risk for some respiratory diseases.

Should I use a nebulizer in an air-conditioned room ? The answer is yes! Because the nebulizer can solve the disadvantages of conditioning, help balance the humidity in the room, thereby protecting the user's health. Air conditioners and nebulizers are really 'born for each other' devices.
