3. Where to regulate water leakage in the cold?

Should the outdoor unit be installed outside?

Outdoor air conditioning units are installed outdoors will have the advantage of better heat because there is a large, airy space, not hindered by household items. However, the installation of outdoor outdoor air conditioner makes this equipment suffer from rain and sunshine all year round. This is the main reason that the outdoor unit reduces the life expectancy, is easy to damage and users have to pay repair costs, even the worst case is to buy a new one.

Today, more and more technology companies that produce air-conditioned outdoor units are able to withstand any harsh weather, but this also helps to protect them somewhat. Therefore, you should not install outdoor outdoor units without sun and rain roof.

The best position to set the outdoor unit for air conditioning

As analyzed above, setting the outdoor unit is not appropriate, the most appropriate position to place the outdoor unit is in cool places, avoid direct sunlight and preferably equipped with roof. cover.

Besides, the position of installing outdoor air conditioner unit should be at least 10 cm away from the wall and placed in places where there are no obstacles in front or places where the wind direction is frequent. This will help the fan to absorb the best wind and blow the heat out effectively.

In addition, you need to keep in mind that the wind direction is directly perpendicular to the propeller, otherwise it will interfere with the large resistance to the fan rotation speed, wasting power consumption.
