In the season, the demand for refrigerators of some families is often less or even in need of use, or in the case of a family planning a travel from a few weeks to a month. deciding whether to unplug the refrigerator is one of the headaches that makes us think. Understanding this user's concern, TipsMake.com will now have the correct answer for you in this article.

In the season, the demand for refrigerators of some families is often less or even in need of use, or in the case of a family planning a travel from a few weeks to a month. deciding whether to unplug the refrigerator is one of the headaches that makes us think. Understanding this user's concern, TipsMake.com will now have the correct answer for you in this article.

1. 9 foods should not be stored in the refrigerator
2. What to do when the refrigerator vibrates and screams abnormally?
3. Why does the refrigerator lose heat and is not cold enough?

1. Should I unplug the refrigerator when not in use?

One of the questions of families when winter comes is whether to freeze the refrigerator when not in use, the answer is no. Even if the winter season needs not to be used much or when it is suspended for a period of time, we should still plug in the refrigerator. Many people mistakenly believe that pulling out the refrigerator's power source in the winter will be good because it reduces the amount of electricity consumed significantly. But in fact this is the reason why the life expectancy of the cabinet is decreasing.

In the winter, even if the demand is low, do not disconnect the refrigerator.

You may not know, when you disconnect the refrigerator from the power source for a long time, the process of circulating between the outdoor unit and the indoor unit does not occur, the equipment that is not dried leads to oxidation, gas leak, and gas leak. . Particularly more dangerous, if before disconnecting the power without cleaning the refrigerator clean, dry, condensed steam will dampen the internal sensor devices and lead to damage to these devices. makes cabinets reduce cooling function.

2. The refrigerator should be adjusted to the proper temperature

The adjustment of refrigerator temperature is quite important, especially in winter. However, there are very few families who pay attention to adjusting the temperature to suit their needs. We should adjust the refrigerator temperature to level 1, this is the recommended level set to make sure the refrigerator is always working stably and maximizes power consumption.

At level 1 the temperature in the cabinet ranges from about 2-5 degrees, it is suitable to preserve food in winter as well as in the case of your family back home or long-term travel. Currently, most refrigerators have the function of automatically disconnecting when the required coldness has been reached, so electricity will not cost as much as you think. Adjust the refrigerator to a minimum so that your refrigerator works stably and no damage occurs.

Adjust the refrigerator to the lowest cooling level and leave the power to the cabinet.

3. Notes in case of having to unplug the refrigerator for a long time

If the period of not using the refrigerator lasts several months to a year, of course you should disconnect the power completely, but still need to keep in mind some of the following:

1. Before unplugging the power, remove all food from the cabinet and use a soft cloth to clean the cabinet clean inside and out.

Use a soft cloth to clean the refrigerator.

1. Place cabinets in well-ventilated areas, avoid placing them near the kitchen. You can use cotton cloth instead of nylon because the material is not airy, so it will cause water vapor to penetrate and cause the components to rust.
2. Occasionally plug in the cabinet for a few hours to let the outdoor unit, indoor unit be operated and avoid the occurrence of some unexpected problems when using it again.

By now you must know how to store and use the refrigerator effectively this winter as well as the upcoming Tet holiday right? Hope the above information has provided useful information for you.

Have fun.
