## Gas stove

Current gas stove is divided into 3 basic types: single stove, double stove and mini stove with diversified models, meeting many different uses of consumers.

*Gas stove not picky pot, cheap price and many types of options*

### Advantages when using gas stove

1. Cheap price, many types. Many types of kitchens to choose from a variety of prices from 200,000 VND to 3,500,000 VND depending on the material and features of the product.
2. With a double gas stove, you can cook two cookers at the same time to save more time.
3. Easily adjust the flame directly when cooking, cooking quickly.

4. Do not picky the cooking pot, use most of the pots with different materials, the diameter is not limited to small, as long as the size is right and the kitchen surface.

## Disadvantages of gas stoves

1. Performance is not high at only 60% due to waste of heat used to heat the air.
2. Large, bulky design, need to be fixed in one place.
3. It costs a lot of expenses such as gas valves, gas tanks, gas exchange fees periodically. Cooking up gas costs time to wait for gas cylinders to change, and gas prices go up.
4. Gas and flame when cooking will sometimes make black bottom pot, pan . difficult to clean.
5. The kitchen should be cleaned regularly to ensure the safety of the cooking area.
6. Because the stove uses gas to burn, it produces a lot of CO, affecting the environment.

## Electric stove

Many housewives are planning to change from gas stoves to electric stoves, with the aim of saving fuel, being safe, compact and convenient to move. With two popular types are electromagnetic stove and infrared stove.

*Induction cooker has a compact design, easy to clean and safe to use*

## Advantages when using electric stove

1. Compact, modern and luxurious design, easily arranged kitchen anywhere.
2. Diverse cooking regime such as soup cooking, frying / stir-frying, grilling, hotpot, cooking .
3. Do not radiate large heat to cause heat, uncomfortable for you when cooking.
4. Just plug in the power outlet to be used immediately.
5. Safe, no worry about fire and explosion, less risk than using gas stove.
6. Easy to clean after use.

## Disadvantages of electric cookers

1. Designing only one dish on the kitchen makes it more time consuming when you need to cook many dishes at the same time.
2. Cannot be used at times of power outages.
3. The operation is more complicated because many functional buttons on the kitchen surface, especially for the elderly.
4. After cooking it takes a while for the stove to cool.

## So buy an electric stove or a gas stove

- If you want your kitchen equipment to be compact, choose electric stove is reasonable. You only need to buy an electric stove, plug in the power can be used immediately, while if you use gas stove you have to buy more gas tanks quite bulky and cost more.

- If you are careful in processing food, choose a gas stove. The gas stove changes the temperature very quickly when you adjust the gas knob, depending on the different dishes that adjust the fire to small and small accordingly, while the electric stove responds more slowly. In addition, areas where electricity is unstable, or outages should use gas stoves rather than electric stoves.

Hopefully this article will help you make an easier decision in choosing to buy an electric stove or gas stove to use!
