

Should you use non-touching car wash powder or non-touch car wash water better for car wash service?

The application of non-touching car wash chemicals with car-washing technology is an important step, bringing great efficiency in the protection and protection of vehicles.

The application of non-touching car wash chemicals with car-washing technology is an important step, bringing great efficiency in the protection and protection of vehicles.

However, this type of chemical is divided into two types: non-touching car wash powder and non-touching car wash water. Between the two product lines should choose which type to bring the highest efficiency? Refer to the article below to get the answer!

Advantages and disadvantages of non-touching car wash water

Non-touching car washing liquid, also called liquid non-touching car wash liquid, is packed firmly and professionally. This type of chemical is used in car wash shops, garage, motor vehicle maintenance centers . True to the name "no touch", when using this chemical to clean, people Using it, you will not need to touch it directly with your hand to ensure that the stains are hit effectively.

Advantages of non-touching car wash water:

1. Liquid solution, stored in plastic cans very convenient to use and minimize the phenomenon of falling and wasting.

2. Very easily soluble in water, not afraid of lumps or clogging as with powder
3. Diverse models have both washing the shell and washing the machine compartment extremely handy, helping users to have many choices.
4. Saving electricity and water, time as well as human labor.
5. Minimize scratches caused by subjective factors
6. For cleanliness up to 99.99%
7. No harm to the skin of the hands, does not peel off or fly the paint of the vehicle

Disadvantages of car wash water do not touch:

1. Relatively higher price than other cleaning chemicals
2. Can only be applied to large-scale car wash shops, car garages, service centers equipped with devices such as specialized car washer, snow foam tank
3. Sometimes there are customers who do not know this washing technology, they think that it is not clean by hand rub, the shop owner will take more time for advice to help them understand more.

Advantages and disadvantages of non-touching car wash powder

Just like non-touching car wash, when using this car wash powder, you do not need direct contact with the skin of your hands, but still ensure flying dirt, mud on the car.

Advantages of non-touching car wash powder:

1. Price is cheaper than car wash water does not touch
2. No harm to the skin of the hands, does not peel off or fly the paint of the vehicle
3. No need to touch but still ensure 99.9% clean
4. Saving electricity and water, time as well as human labor.
5. Minimize scratches caused by subjective factors

Disadvantages of car wash powder does not touch:

1. Powder is packaged so it requires users to carefully store to avoid mold, moisture
2. Powder is easy to be lost and lost
3. If the preparation is not standard, it is easy to cause clumping and clogging of the foam spray pipe.
4. This powder will have difficulty cleaning the surface of oil, which requires users to manipulate through a wipe to clean effectively.
5. Can only be applied to large-scale car wash shops, car garages, service centers equipped with devices such as specialized car washer, snow foam tank
6. Take time to explain to customers to better understand this new car wash technology

Should you use non-touch car wash water or non-touch car wash powder?

In fact, both the car wash solution and the car wash powder do not touch to bring positive effects for the process of scrubbing vehicles. Based on the advantages and disadvantages of each type, based on the actual use demand, users can choose water-based or powdered chemicals.

Note when using non-touching detergent

Whether you choose a powder or water detergent, to bring the best effect, you should keep the following points in mind during use:

1. Should read the user manual to be able to prepare the mixture in accordance with the rate to avoid the case of too thin or too thick will have negative effects on the car wash effect.
2. In powder form, stir thoroughly to avoid clogging of pipelines

3. Leave chemicals on the surface of the vehicle for about 40-60 seconds to penetrate into the stain, then use a high-pressure car washer to spray all the foam on the surface and wipe dry with a soft cloth.
4. Means used to wash should be dry, not sticky with water
