Accidentally when you open the Excel file to work, you do not see the Sheet Tab bar appear to select Sheet. You do not know what to do, so let's learn about the display of Sheet Tab in Excel when hidden in this article.

Here TipsMake.com guides you how to display Sheet Tab in Excel when hidden, invite you to follow.

If you go into Excel but accidentally lost the **Sheet Tab** bar as shown below.

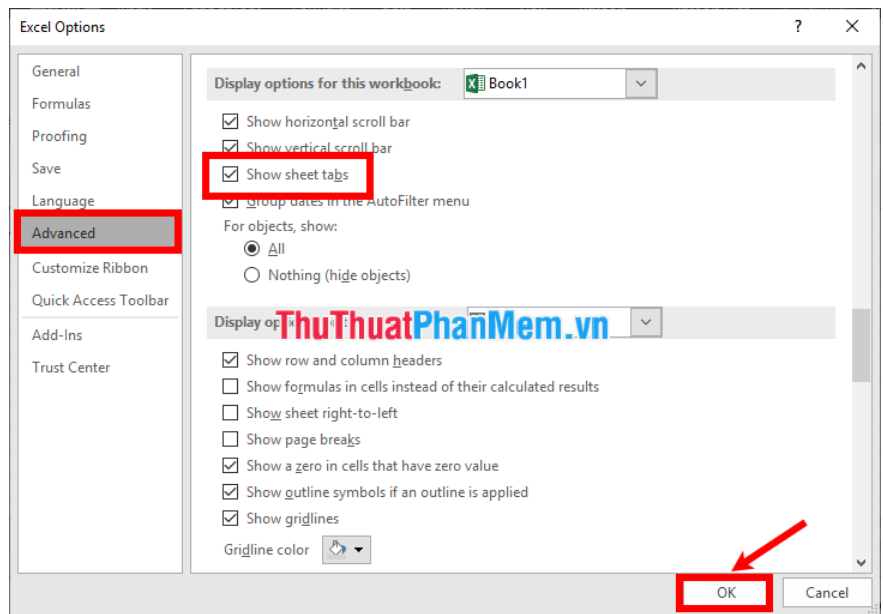

To display the Sheet Tab in Excel again when hidden, do the following:

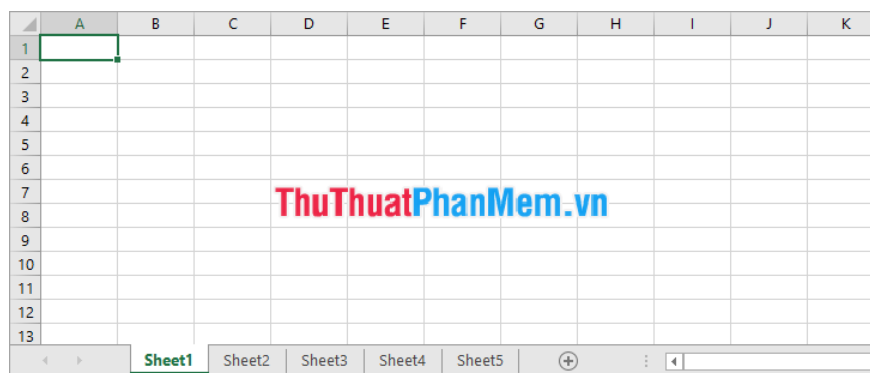

Step 1: Select **File -> Options** .

Step 2: In the **Excel Options** window, select **Advanced** on the left, in the right side, scroll down to **Display options for this workbook** , check the box in the box before **Show sheet tabs** and select **OK**.

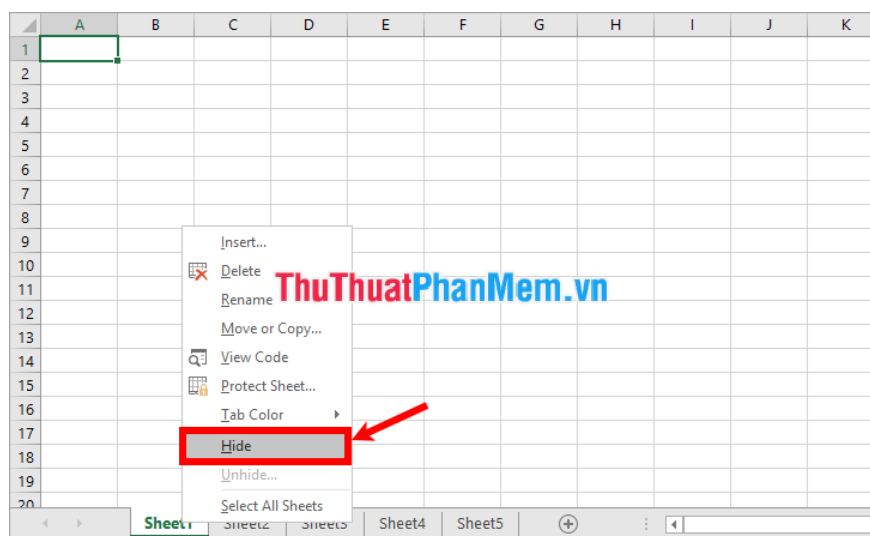

Thus **Sheet Tab** will be displayed.

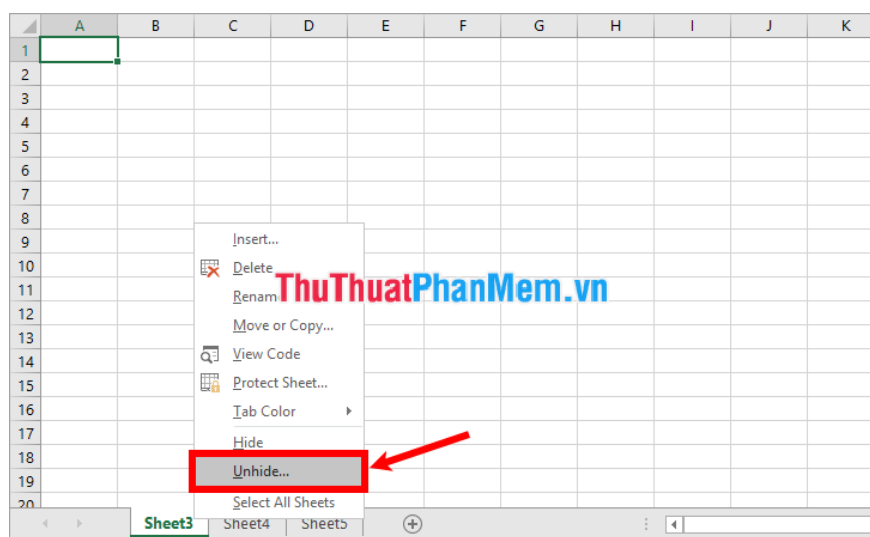

If you want to show a sheet, do the following:

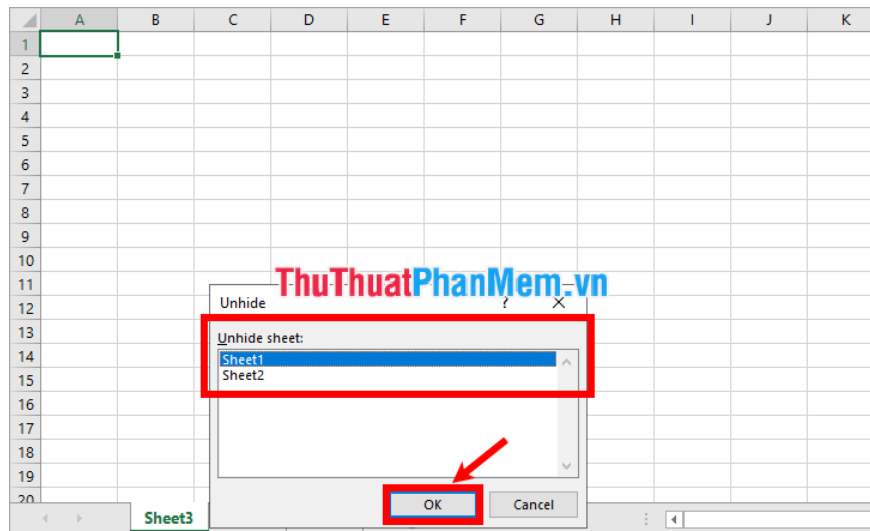

To hide the sheet, right-click the sheet name to hide and select **Hide** .

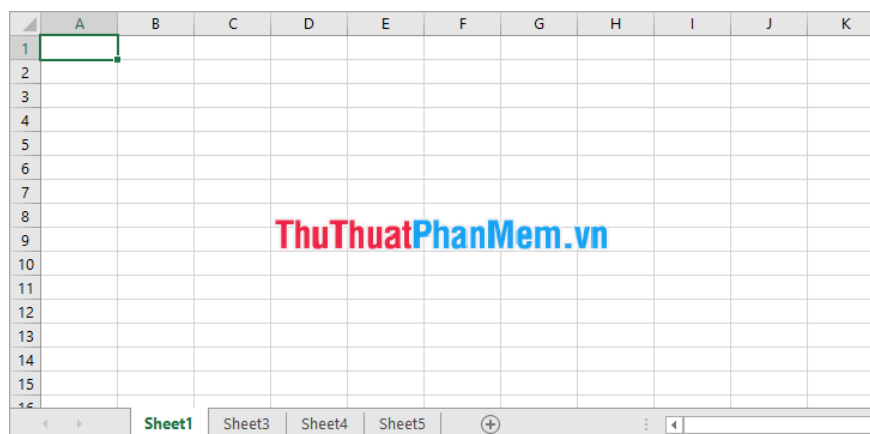

To display the sheet, right-click on any sheet name and click **Unhide** .

In the **Unhide** section, select the sheet to display and select **OK** .

So the sheet will be displayed.
